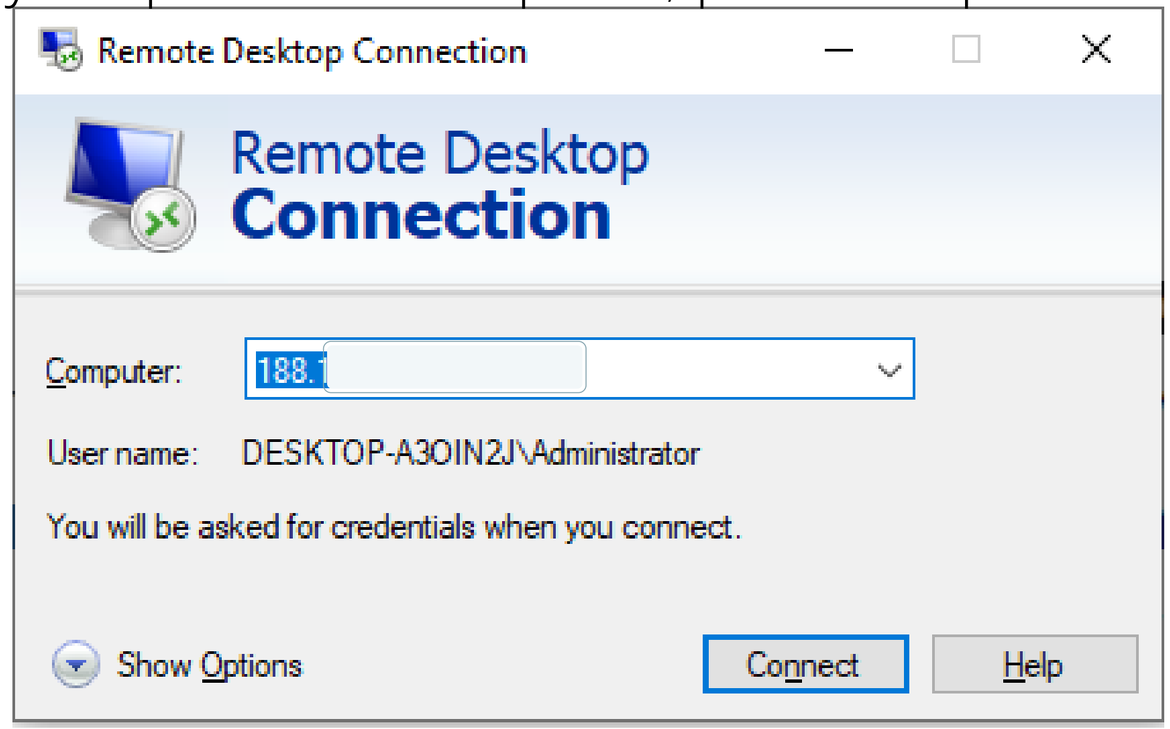
Setup Guide - Full Version (A.I R Edition)

LazeTrader

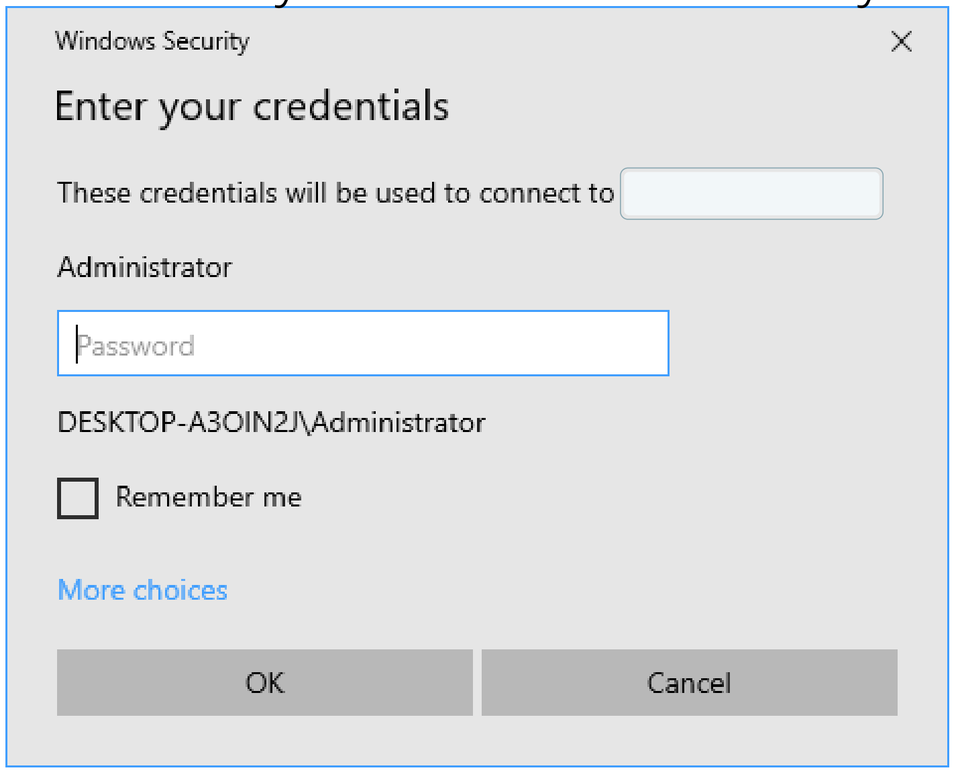
Step 1

Open your Remote Desktop Connection from **your windows Start Button**. Enter the given **IP address** for your VPS. Followed by clicking **connect**. If you intend to run the trading robot on your personal computer, please skip this step.



Step 2

After pressing connect, login with the credentials. For those using our paid VPS, you will receive the login credentials in your email. Do check your spam/junk box too.



Step 3

After logging in, you should see the screenshot as shown below. Click on Google Chrome and download the Broker's MT4 Client Terminal.

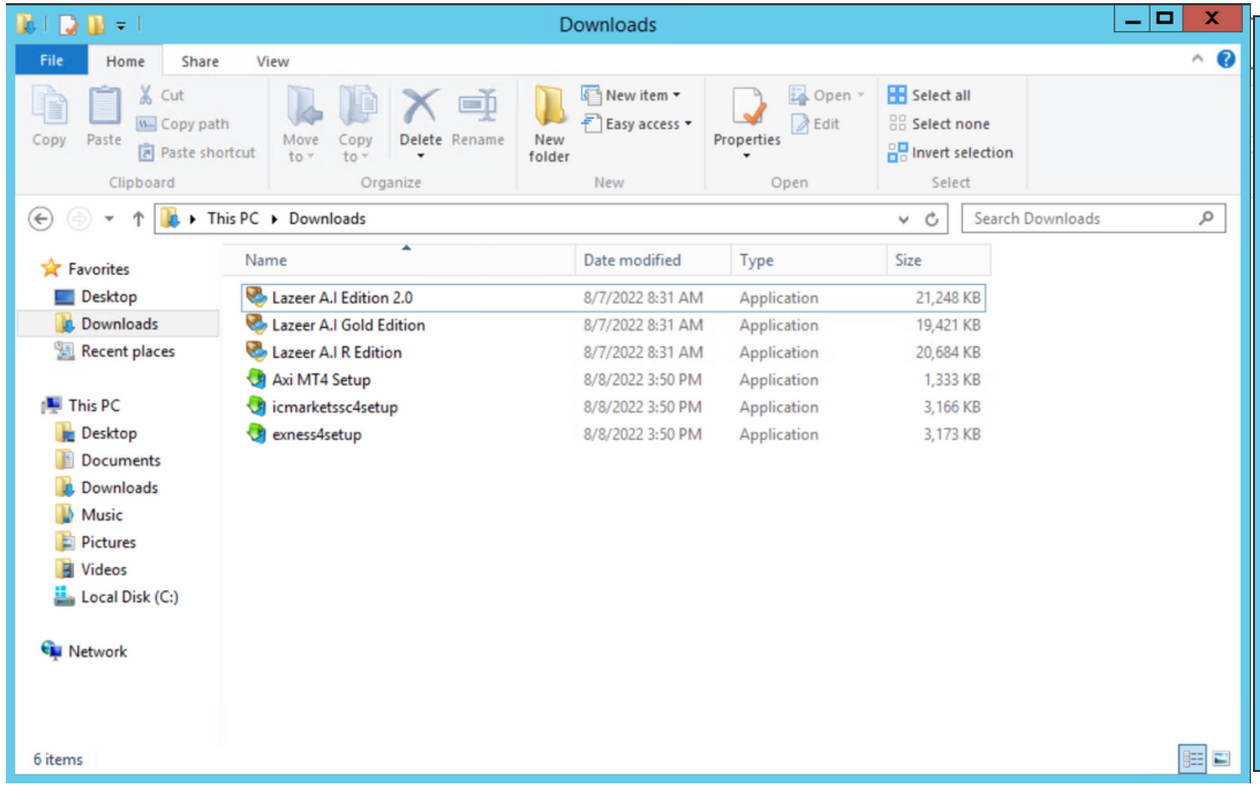
Axi: https://drive.google.com/file/d/1fQ9s3XqnfFNF-RRj5x1l35aT2SlQQ6Xx/view?usp=sharing

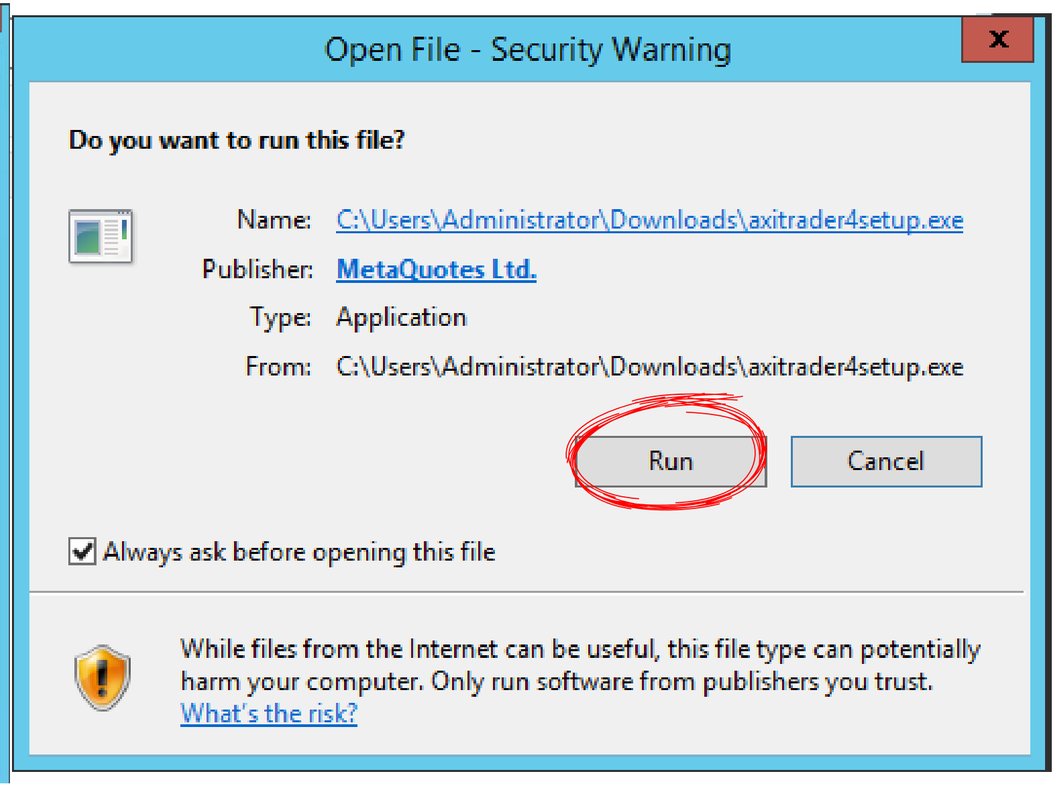
ICMarkets: https://drive.google.com/file/d/13N1MIaVP1Xe_pjvPAEzrRv3zm-1U8moR/view?usp=sharing

ExNess: https://drive.google.com/file/d/12sXkDwTuR9QICav9SPcvlOFGCxsZ5THK/view?usp=sharing

Step 4

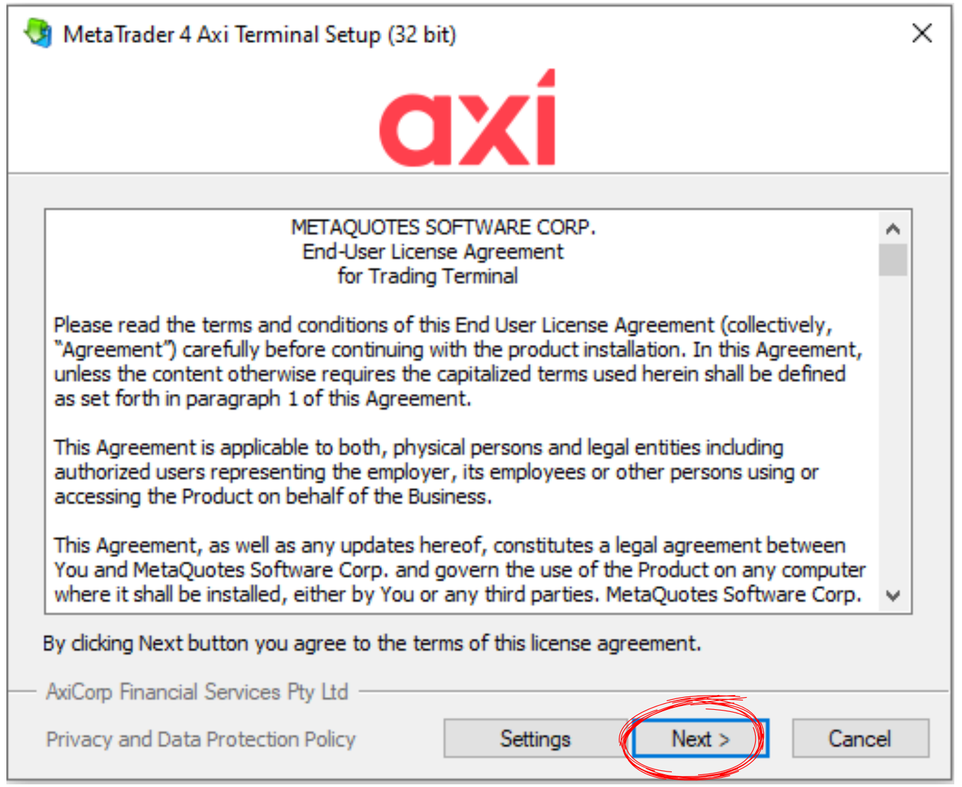
After downloading the Broker's MT4, go to the download folder and click install. Click **Run** to allow installation of the Broker's MT4.





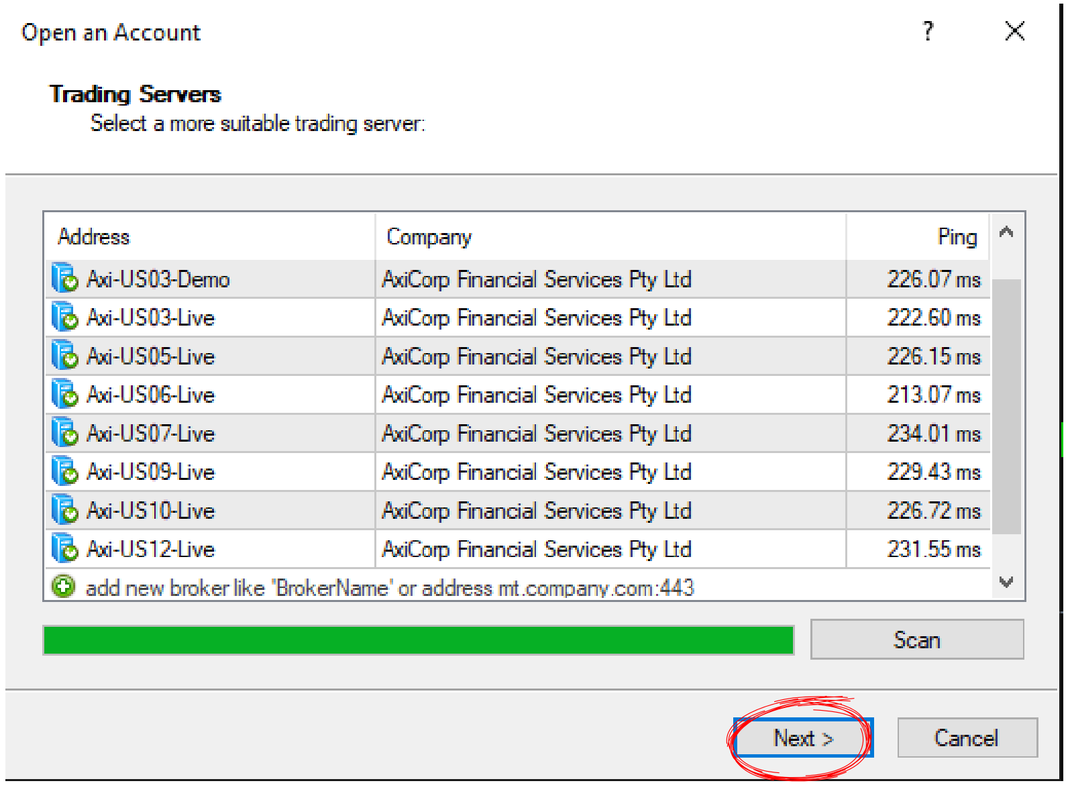
Step 5

Click **Next** and the Broker's MT4 Client Terminal should start installing.



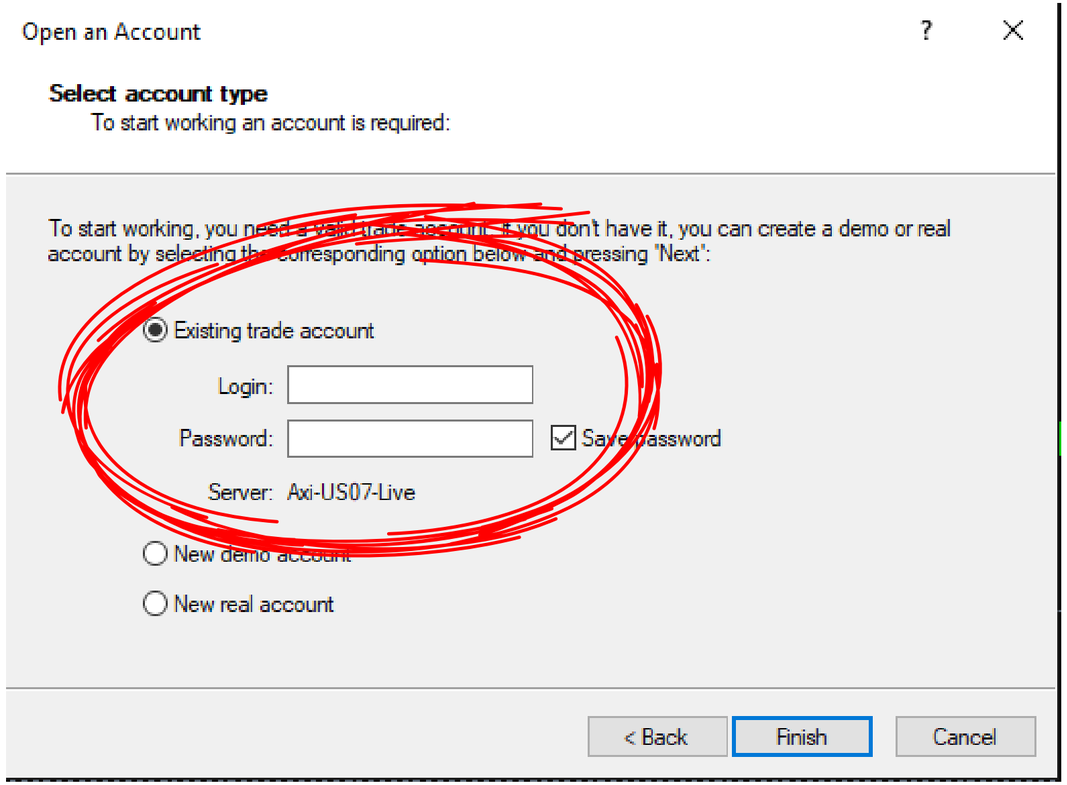
Step 6

Search for the Trading Server that is given by the Broker. It should be in your registered email address when you sign up with the broker.



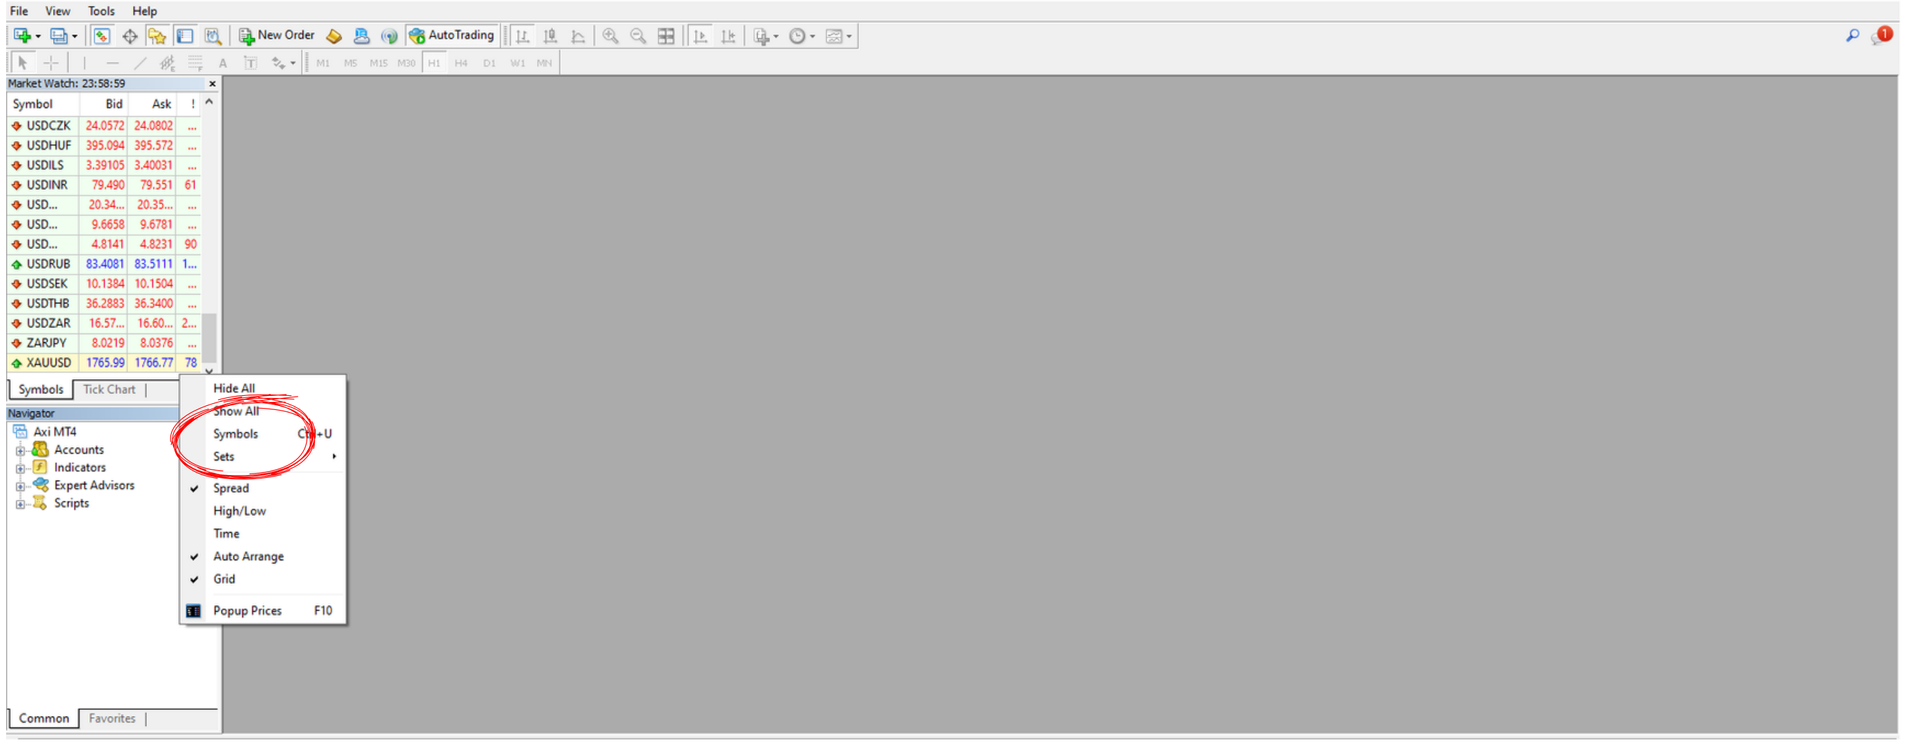
Step 7

Click on Existing Trade Account and input your login and password that is provided by the Broker. It should be in your registered email address when you sign up with the broker.



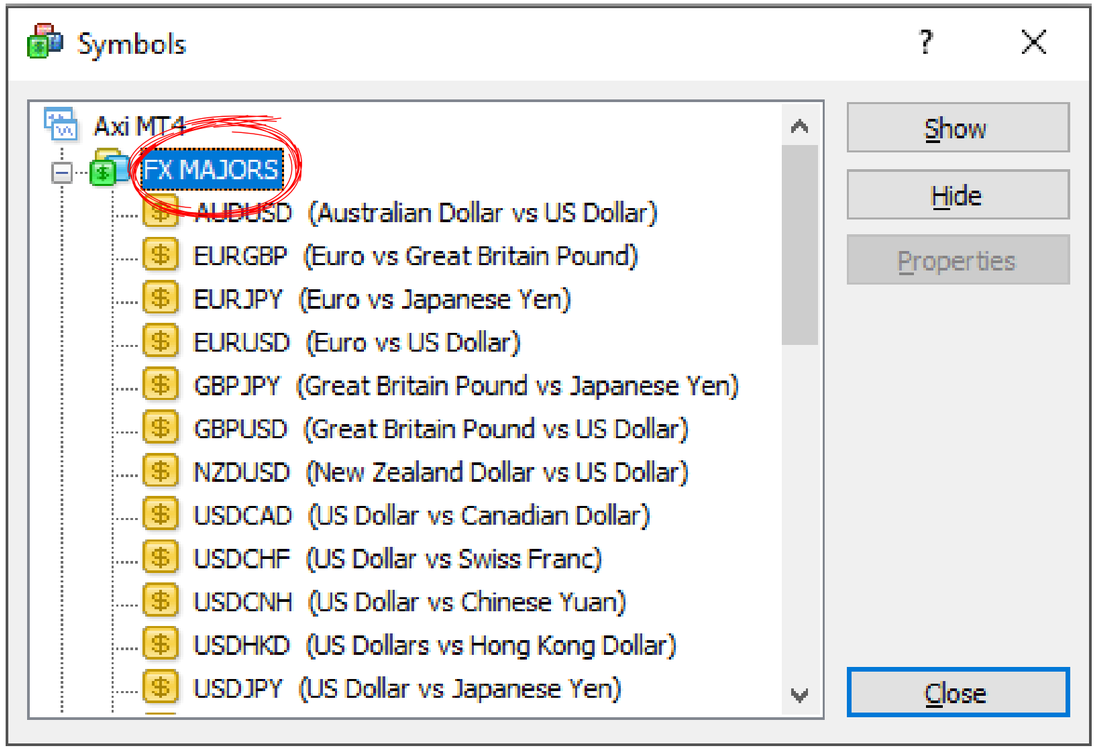
Step 8

Once you have login into your MT4 Client Terminal, **Right click** on the **Market Watch** displayed on the left of your screen and **select Symbols** or you can try **Ctrl + U**.



Step 9

Once you are on Symbols, **Show all the Forex** pairs.
After you open the pairs, it should turn yellow as displayed below. Afterwards, click on close.



Step 10

After completing Step 9, **Right click** on the trading pairs and **Click** on **Chart Window**.

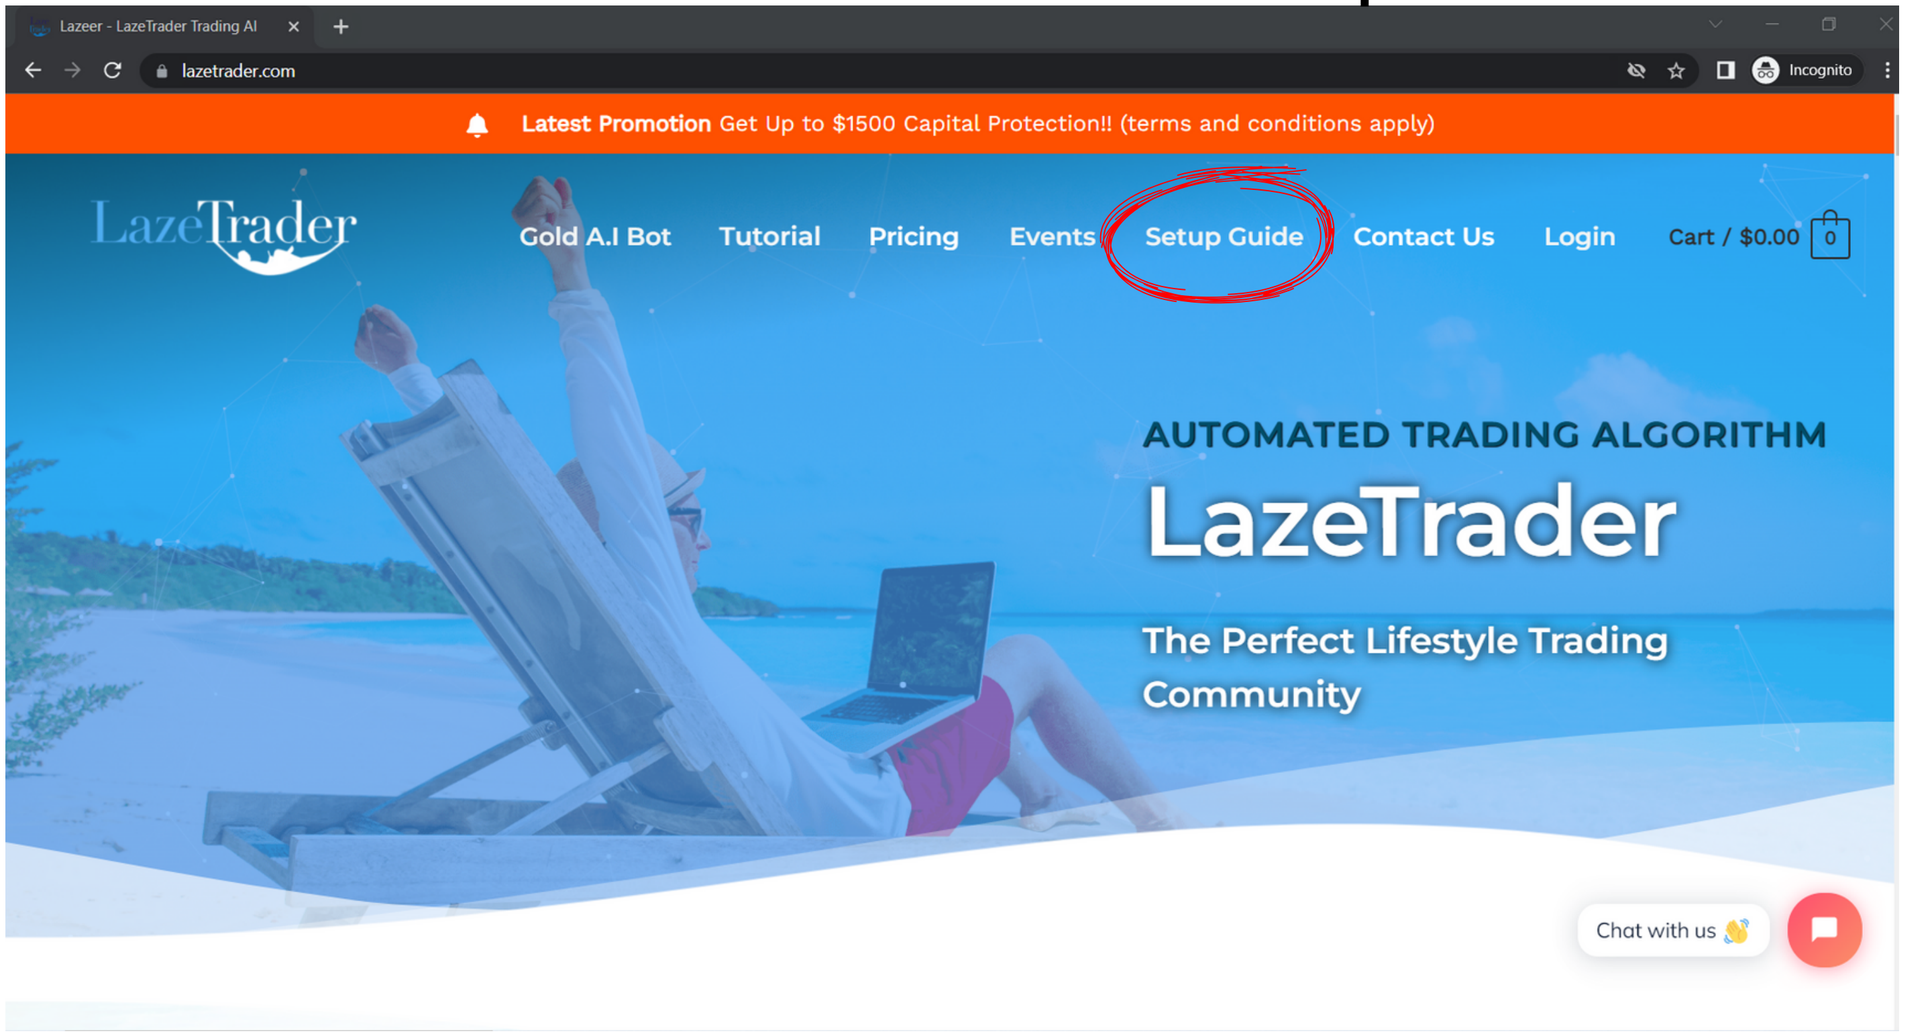
Open only 1 chart of EURGBP

For Timeframe, change it to **H1**.

NOTE: The lower the timeframe, the robot trades more, the lower accuracy. The higher the timeframe, the robot trades lesser, the higher the accuracy.

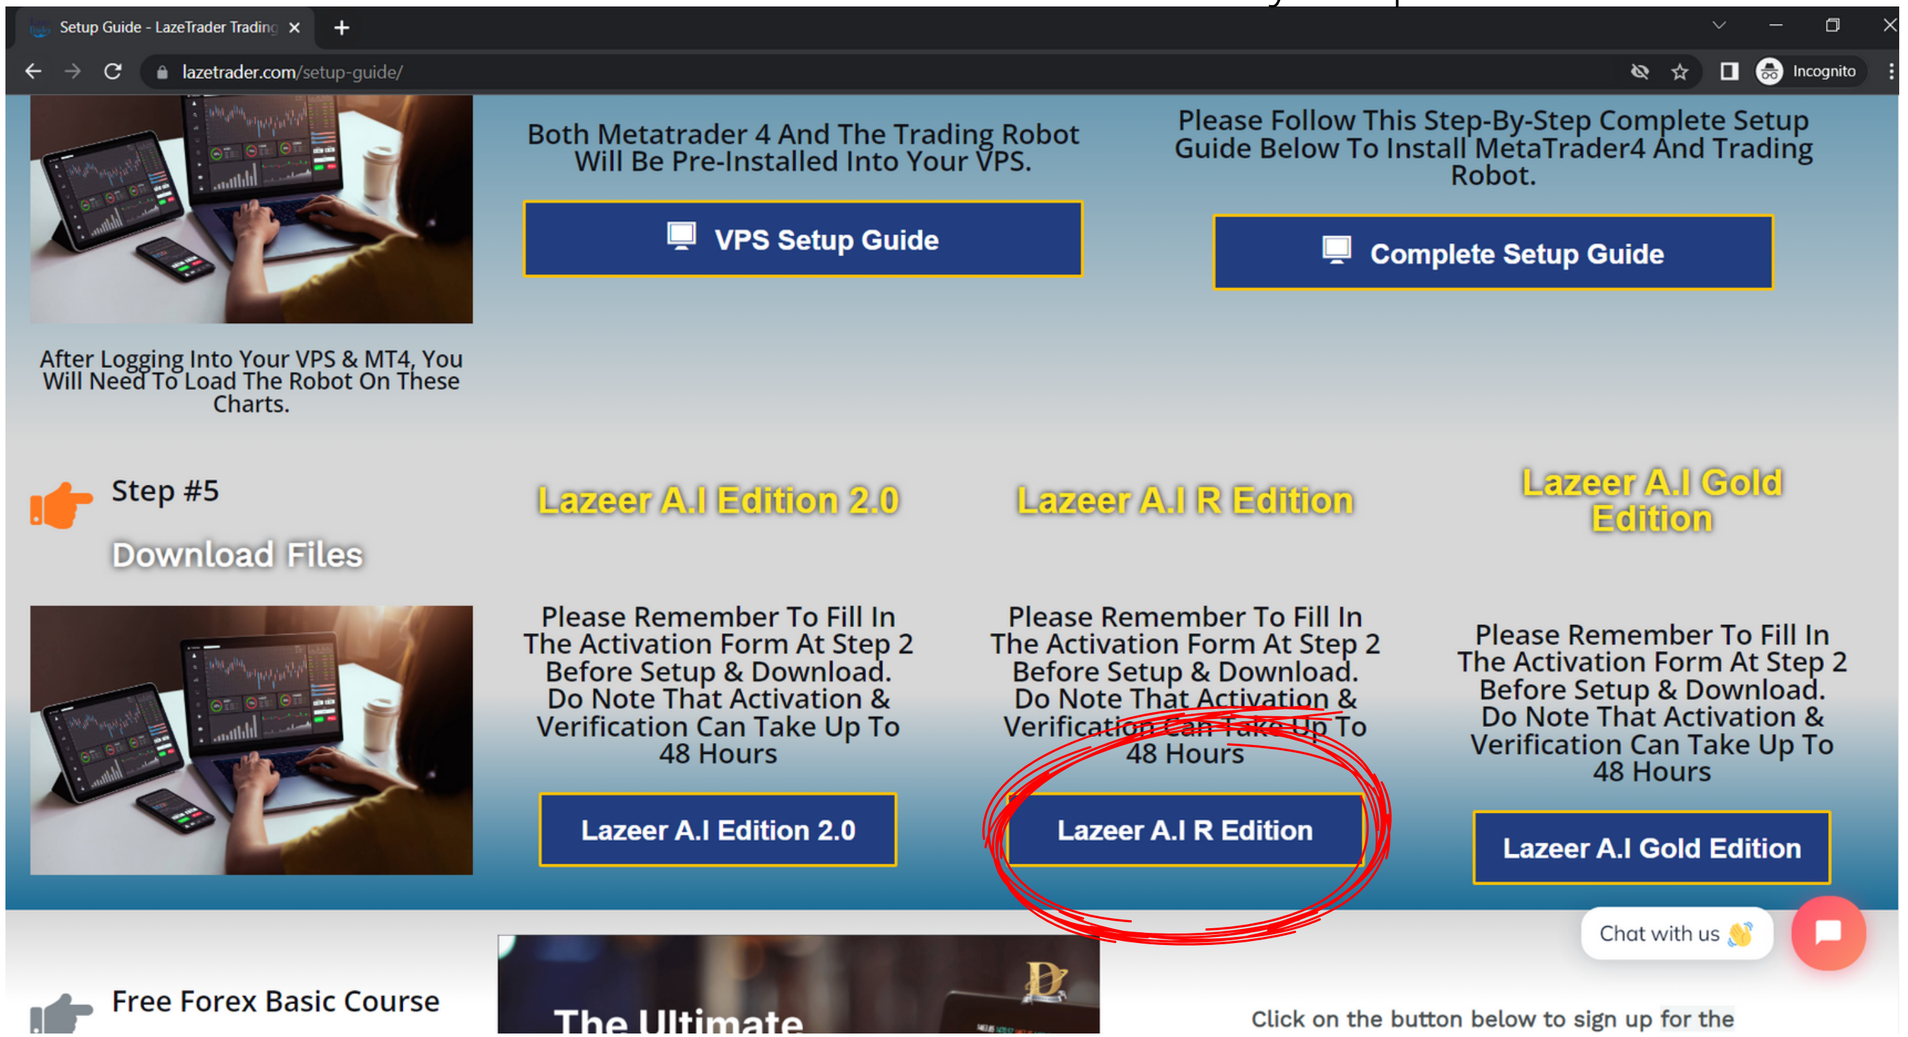
Step 11

Enter into our website and **click** on **Setup Guide**



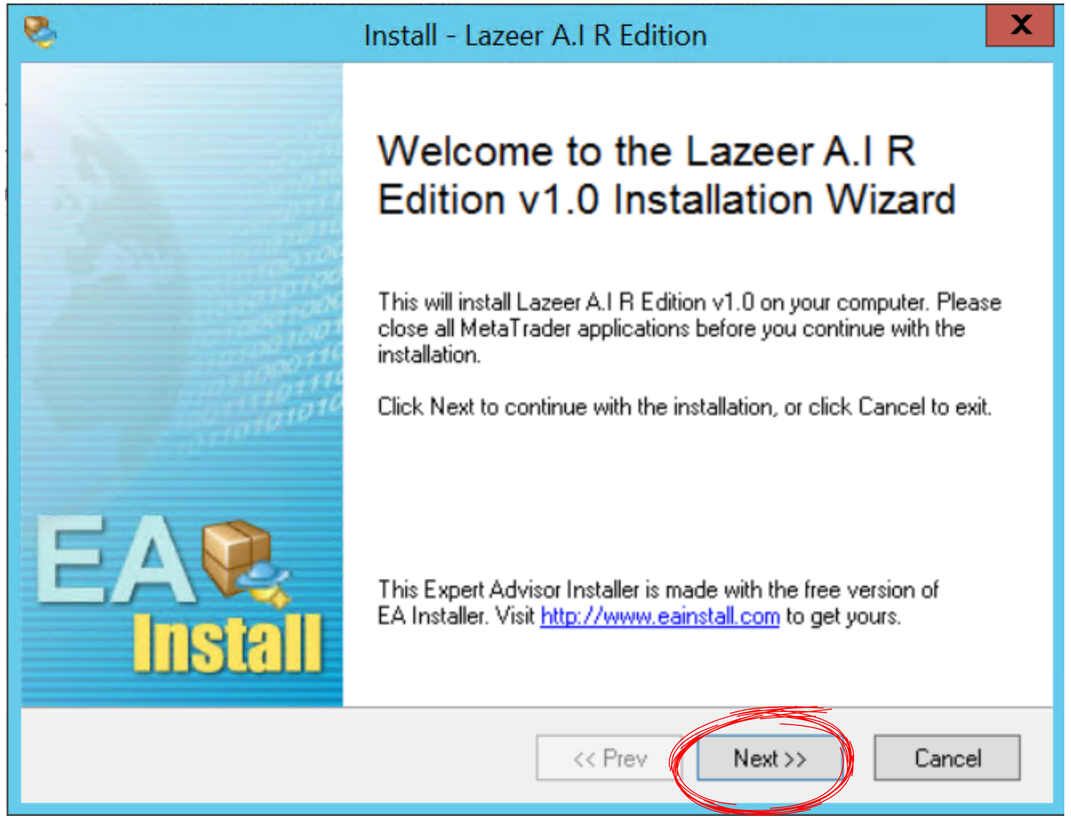
Step 12

Click on **Lazeer A.I R Edition** to download your preferred A.I



Step 13

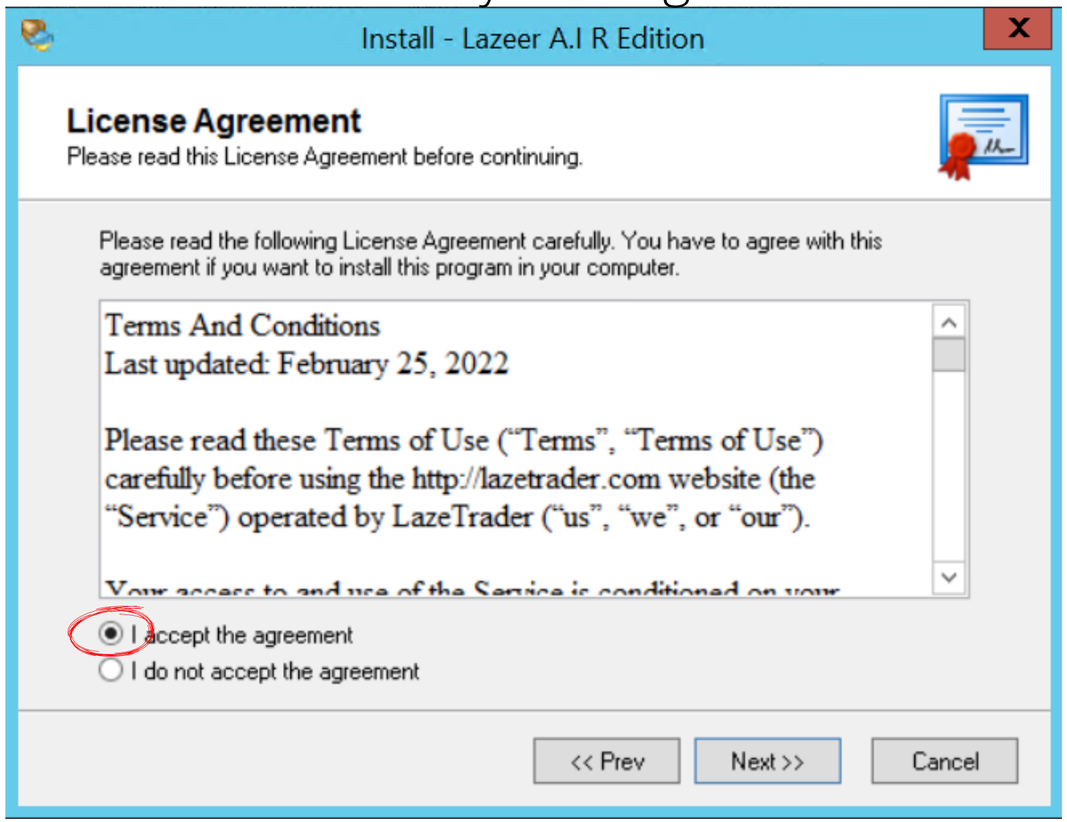
Click **Next**



Step 14

Accept the agreement of usage

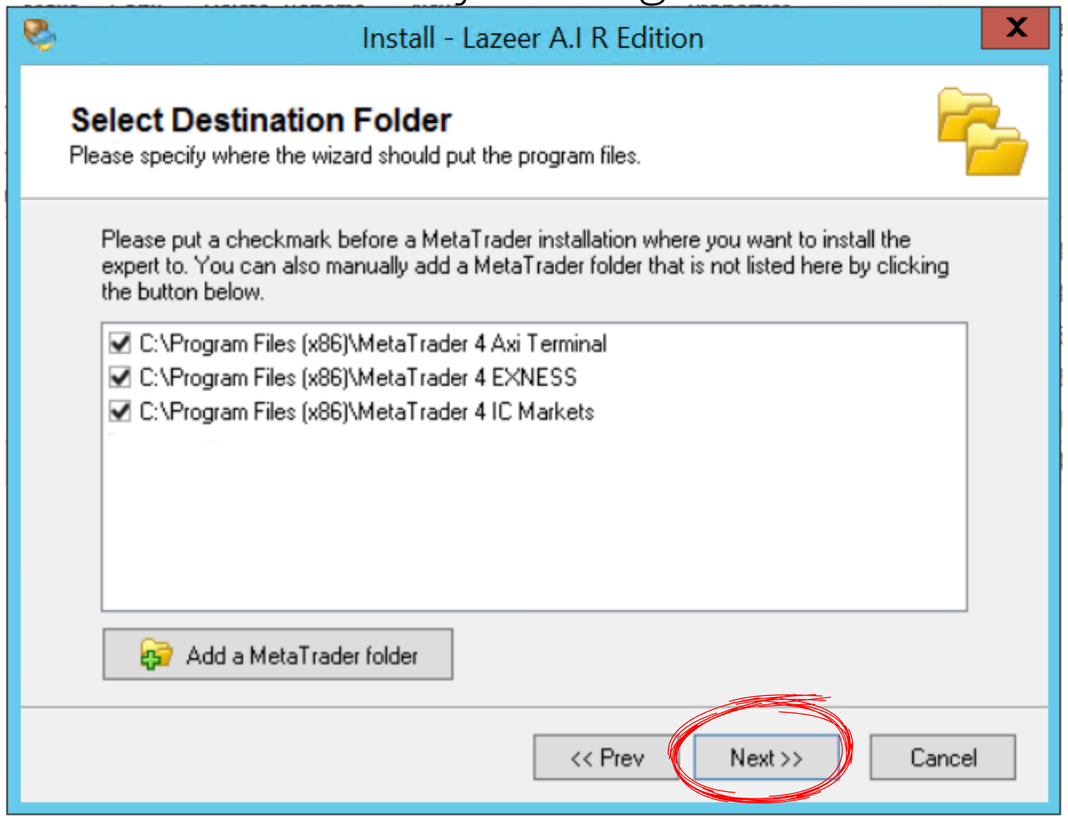
Followed by clicking **Next**



Step 15

Select the destination folder that you wish to download the A.I on.

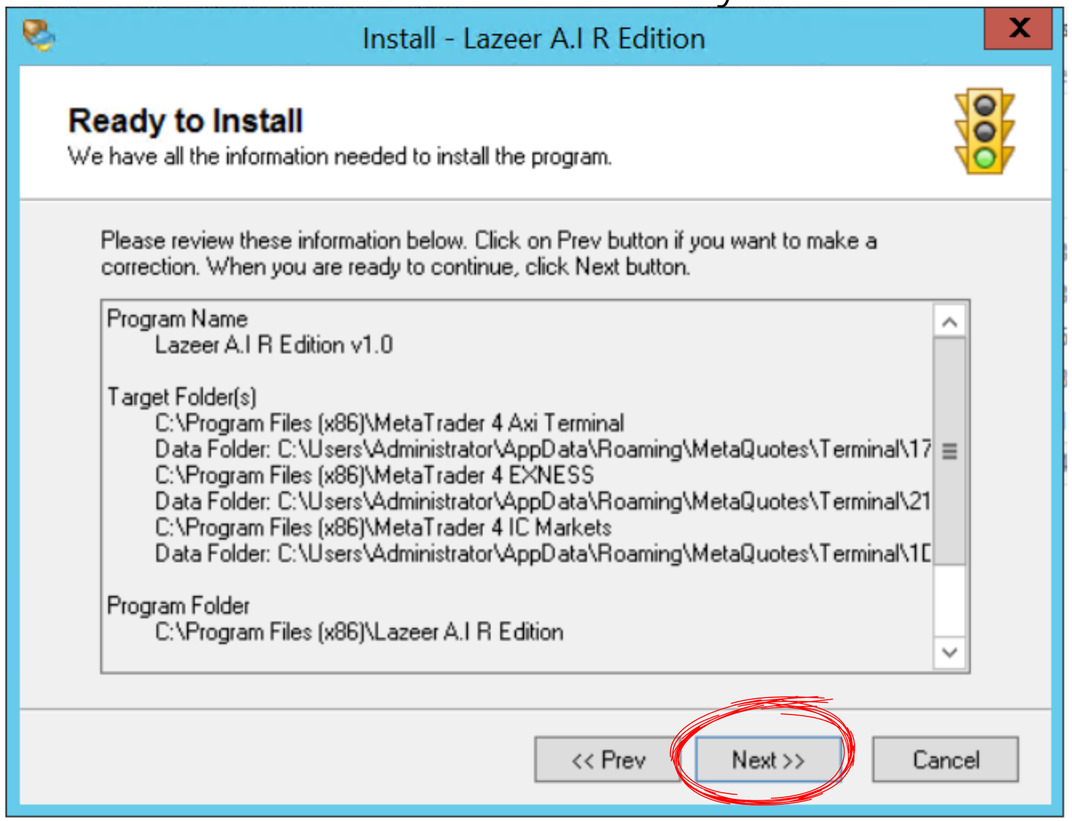
Follow by clicking **Next**



Step 16

Click **Next**

And it should install into your MT4

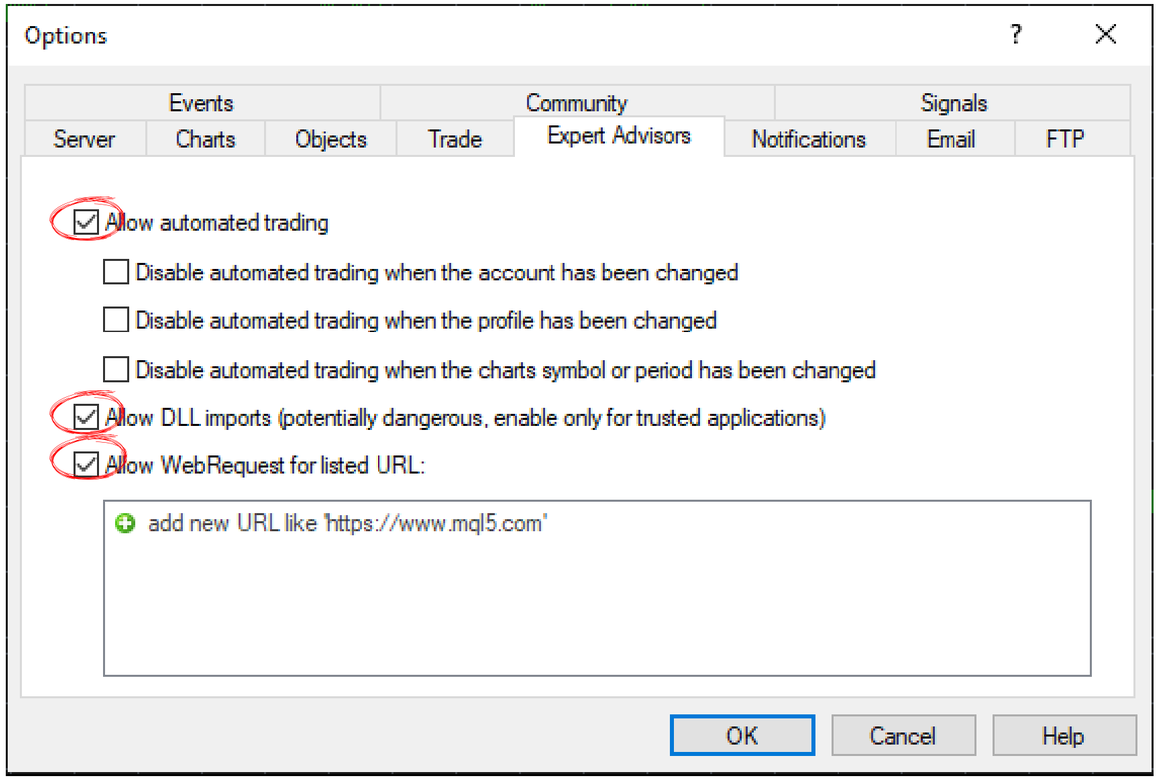


Step 17

Close the MT4 Client Terminal and re-open the MT4 Client Terminal in order for the MT4 to register the new data file loaded. Click on **Tools** and click on **Options** or you can try **Ctrl + O.**

Step 18

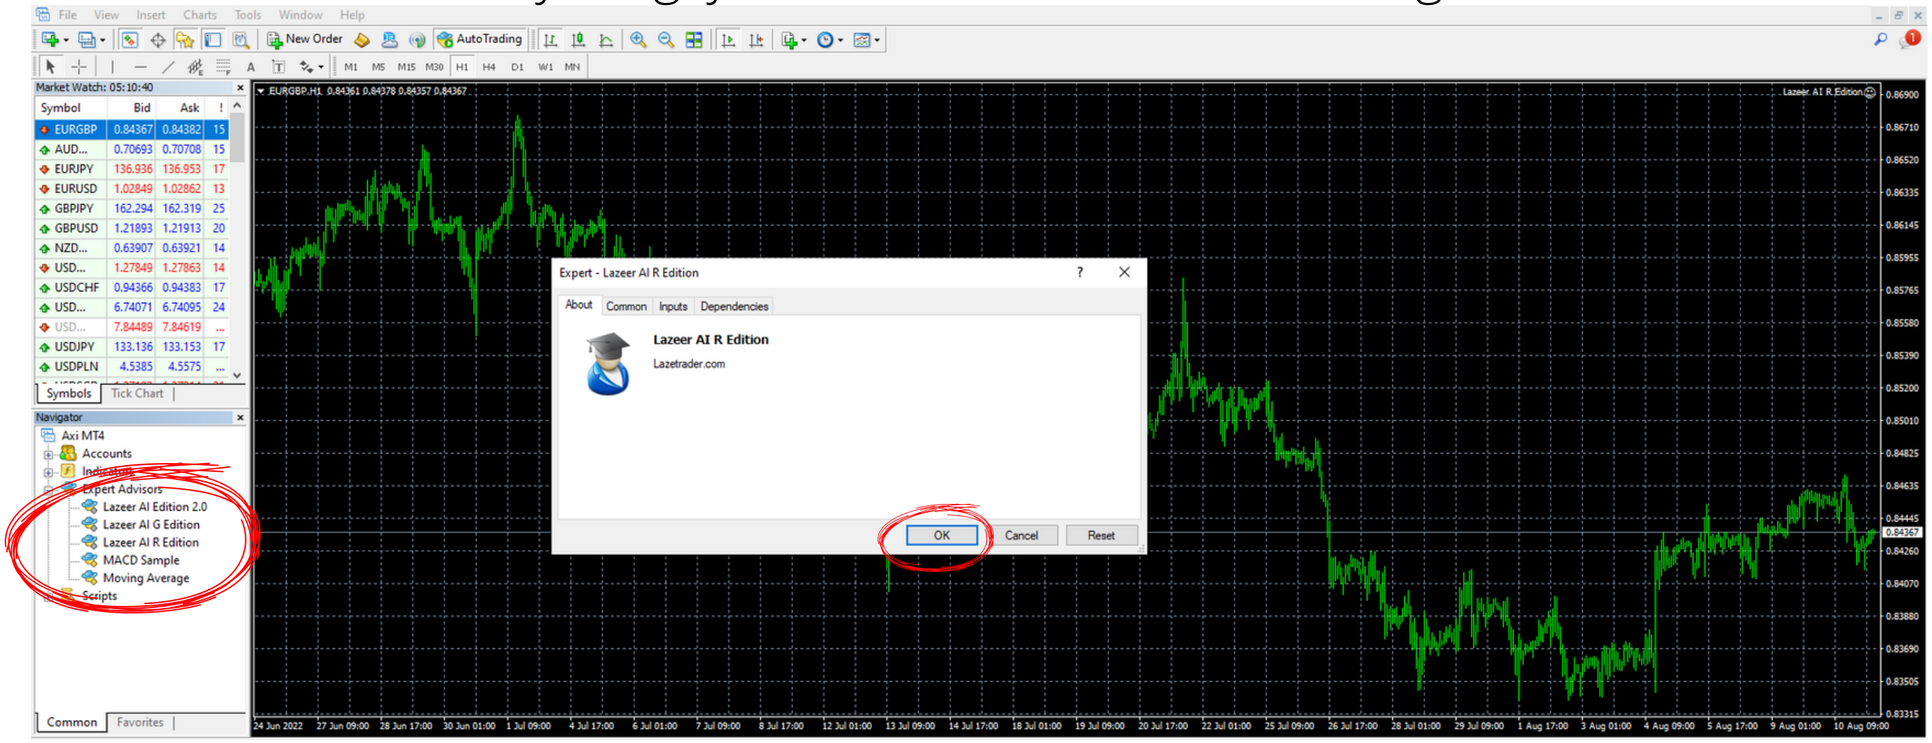
Click on **Expert Advisors** and **Tick** on all the following stated below.



Step 19

On the left of your screen, click on Expert Advisor, on the drop down Click on LazeTrader Lazeer AI R. Click on OK to load the AI into **EURGBP chart only**.

Under Inputs, you have the choice to change the settings accordingly. If you do not wish to change anything, you can use the default settings.



Final Step (A.I R Edition)

This is how the chart should look like. Once all these are done please check the smiley face at the top right of the chart.

If the face is not smiling, it means that you might have to redo the steps, otherwise it should be smiling.
