

Laze Trader Lazeer AI Trading Software User Manual (AI R Edition)

We assume you have already done proper setup, if you have not please refer to the setup guide at our website.

NOTE: Make Sure You Load The Correct Settings First

The screenshot displays the Exness-Real7 trading platform interface. The main window shows a candlestick chart for EURGBPm, H1. A red box highlights the text: "Tools → Options → Expert Advisors Follow the settings as per image". An 'Options' dialog box is open, showing the 'Expert Advisors' tab. The 'Allow automated trading' checkbox is checked. Below it, three unchecked checkboxes are listed: 'Disable automated trading when the account has been changed', 'Disable automated trading when the profile has been changed', and 'Disable automated trading when the charts symbol or period has been changed'. The 'Allow DLL imports (potentially dangerous, enable only for trusted applications)' checkbox is checked. The 'Allow WebRequest for listed URL:' checkbox is also checked, with a text input field containing 'add new URL like 'https://www.mql5.com''. The 'OK' button is highlighted with a red box. The bottom of the interface shows the account balance: 6 505.41 USD, Equity: 6 505.41, and Free margin: 6 505.41.

In order to change the settings of the trading software,
Press F7 or right click on chart and select Expert advisor > Properties

The screenshot displays the Exness-Real7 trading software interface. The main window shows a candlestick chart for the EURGBPm, H1 timeframe. A red box highlights the 'AutoTrading' button in the top toolbar. Another red box highlights the 'Lazeer AI R Edition' icon in the top right corner. A third red box highlights the 'Expert Advisors' menu item in the right-click context menu, with a sub-menu showing 'Properties...' (F7) and 'Remove'. A fourth red box highlights the 'Properties...' option in the 'Expert Advisors' sub-menu. The 'Properties' window is open, displaying the following information:

- Status = Not Trading
- Time (GMT) = 2022.07.19 10:43
- Account Number = 9369953
- Account Name = Standard
- Account Balance = 6505
- Account Equity = 6505
- Account Drawdown = 0.00 %
- Weekly Net Profit = 45
- Next News After = 256 mins
- Previous News Passed = N/A

The bottom of the interface shows the 'Order' window with the following details:

Order	Time	Type	Size	Symbol	Price	Commission	Swap	Profit
Balance: 6 505.41 USD Equity: 6 505.41 Free margin: 6 505.41								0.00

The bottom status bar shows the attached expert properties, F7, and the default settings: Default, 2022.06.20 09:00, O: 0.85931, H: 0.86026, L: 0.85911, C: 0.86000, V: 1171, 6503/9 kb.

Auto-Compounding Feature (Autolot)

The screenshot displays the Exness-Real7 trading platform interface. The main window shows a EURGBPm chart with a green line representing the price movement. A market watch list is visible on the left, listing various currency pairs with their current bid and ask prices. The 'Expert - Lazeer AI R Edition' settings window is open in the foreground, showing a list of variables and their values. The 'Autolot' variable is highlighted with a red box and is set to 'true'. Other variables include 'RecoveryTrade_ON', 'FixLot', 'Multiplier', 'Step', 'Distance_Multiplier', 'TakeProfit', 'Stoploss', 'MaxTrades_EachSide', 'MagicNumber', 'Symbol1', 'Symbol2', 'Symbol3', 'Symbol4', 'Symbol5', 'Symbol6', 'MaxPairTrades', 'sep1', 'Filter_TradingTime', 'Time Start', 'Time End', 'Monday', 'Tuesday', 'Wednesday', 'Thursday', 'Friday', 'sep2', 'is_Weekly_Goal', 'Weekly_Goal_Percentage', 'sep3', 'is_Portfolio_SL', 'Portfolio_Percentage', 'is_max_spread', 'max_spread', 'sep8', 'is_max_spread', 'max_spread', 'sep9', 'Stop Trading for News', 'When to Stop Before News Hours', 'When to Start After News', 'Include high', 'Include medium', 'Include low', 'Include speaks', and 'Include holidays'. The 'Autolot' variable is set to 'true', indicating that the Auto-Compounding feature is turned on.

Set True to turn on and Set False to turn off

If Auto-Compounding is turned on, every \$1000 is based on increment of 0.01 to trade automatically.

So if a \$10,000 capital is deposited then the trading software will trade 0.1 lot per trade onwards.

If set to false then you can manually adjust the lot size depending on your risk appetite at the Fix lot there.

RecoveryTrade_ON

The screenshot displays the MetaTrader 4 interface with the Lazee AI R Edition Expert Advisor settings window open. The 'RecoveryTrade_ON' checkbox is highlighted in red and is checked. The background shows the MT4 interface with a market watch, a chart of EURGBP, and a terminal window.

Price Commission Swap Profit

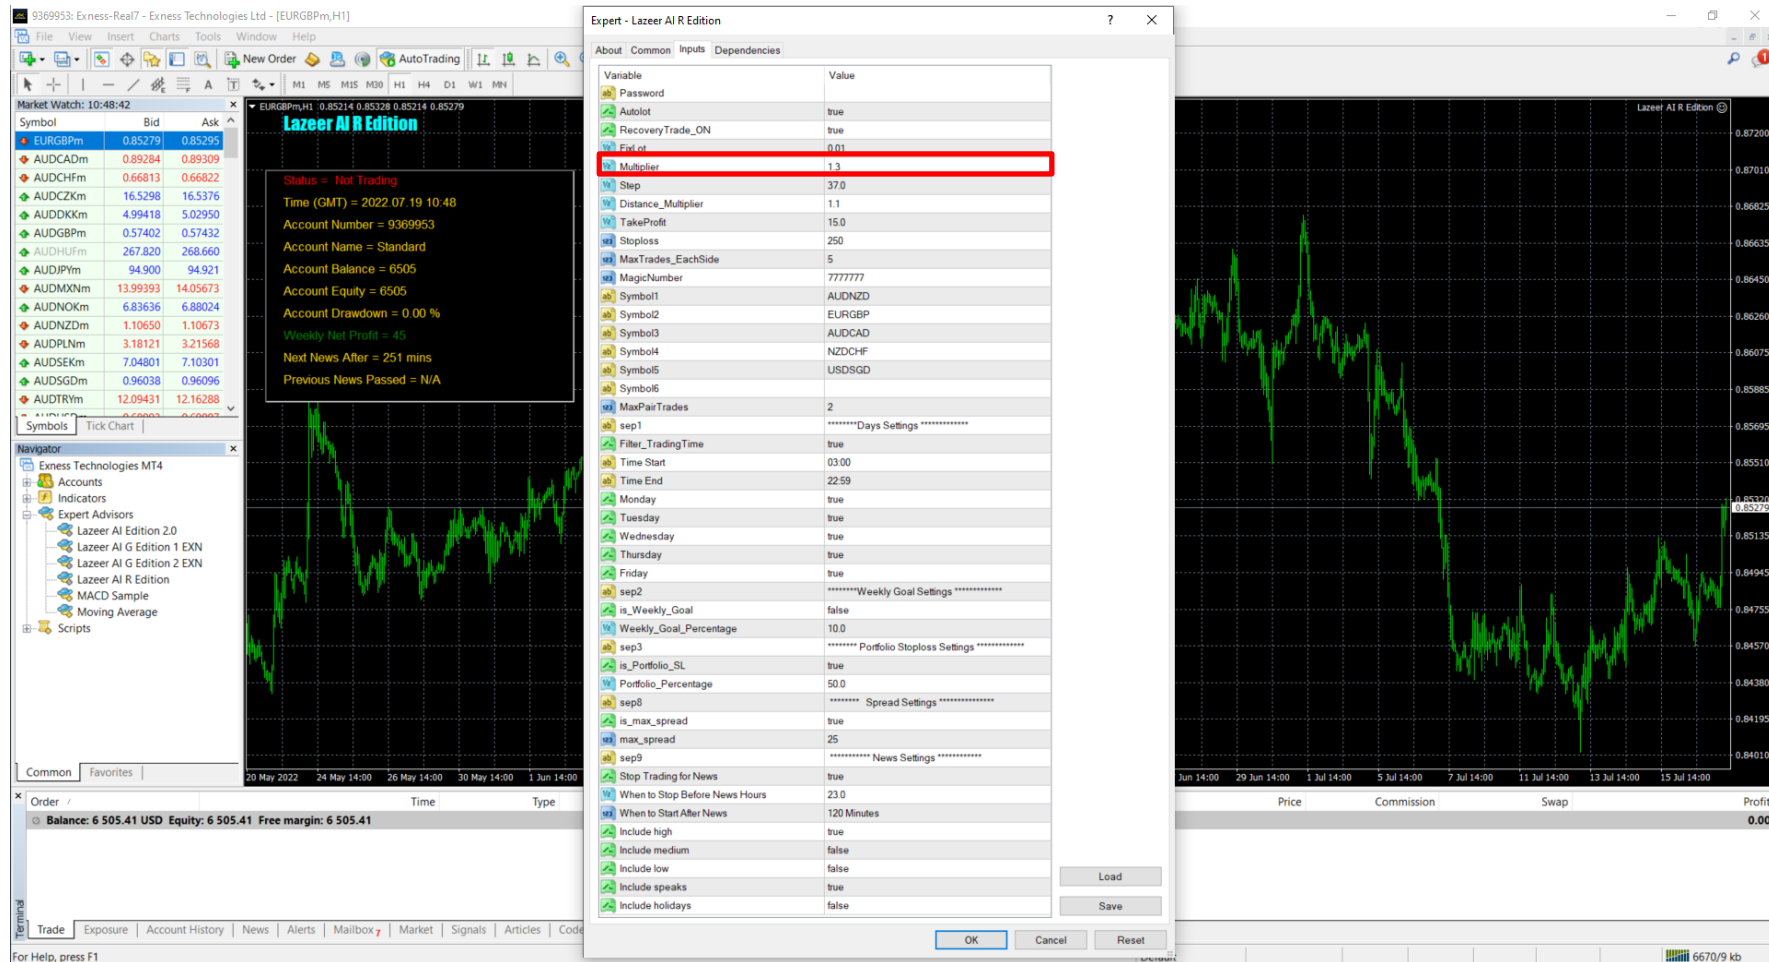

0.00

6670/9 kb

FixLot Function: This function only works when you turn Autolot False.

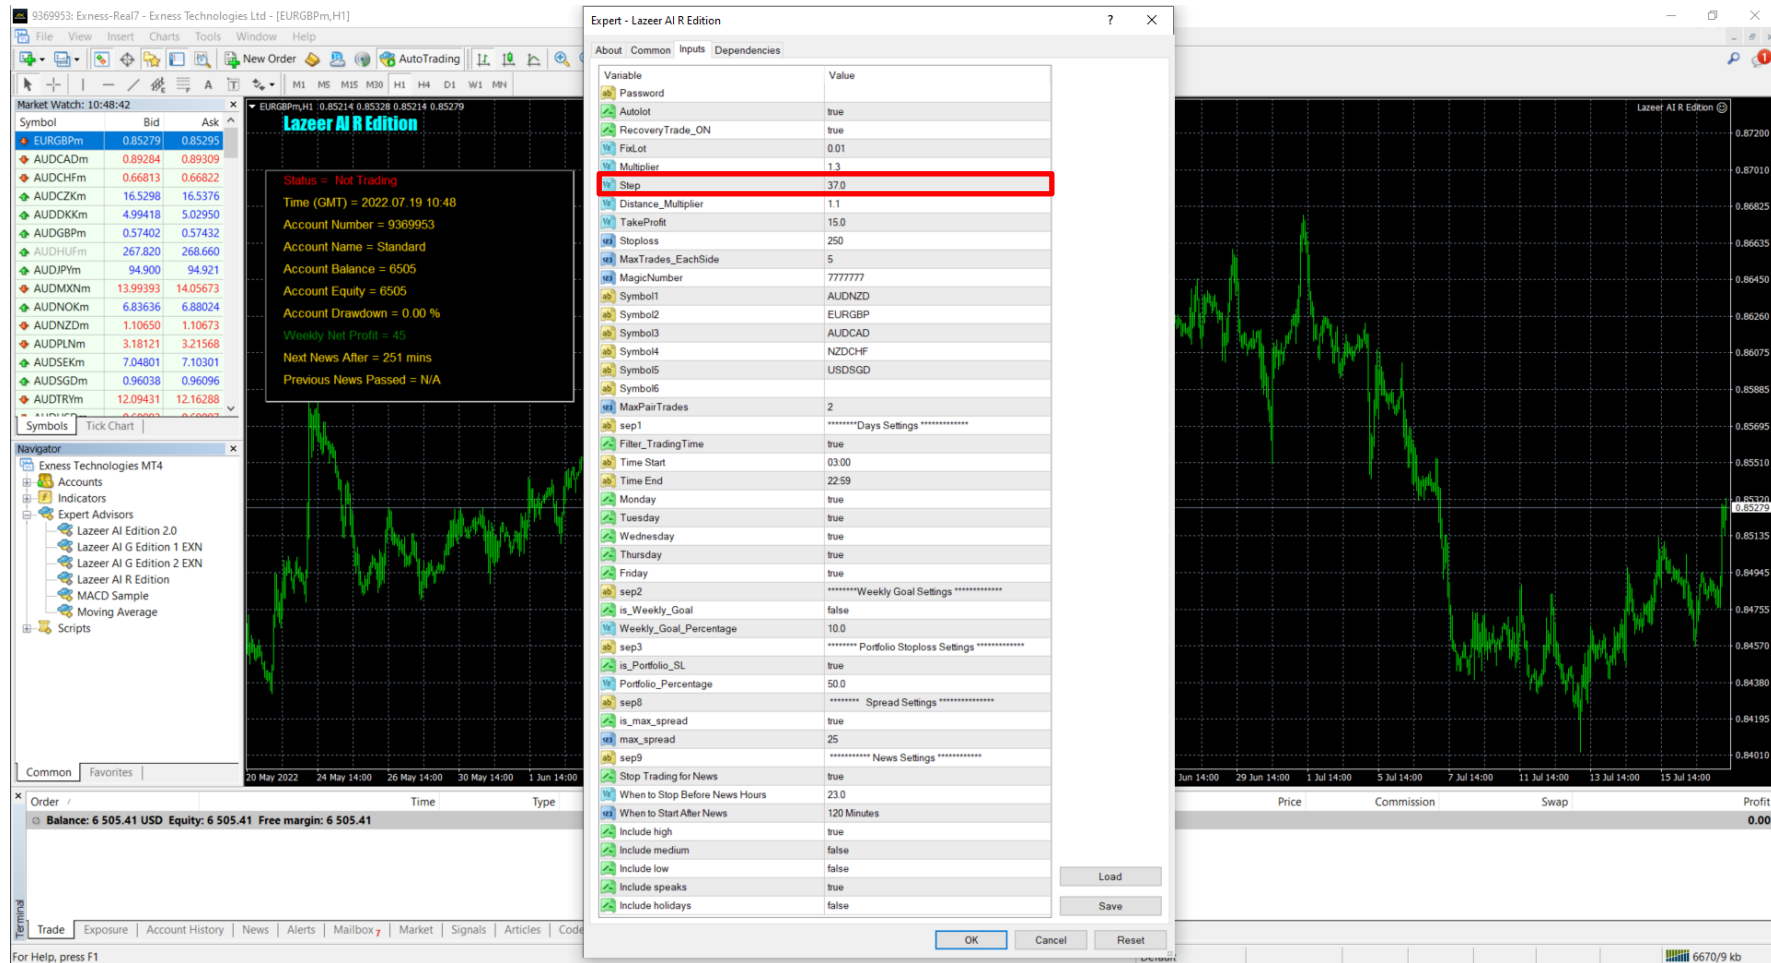

User may be able to adjust the lot size traded manually.

Multiplier

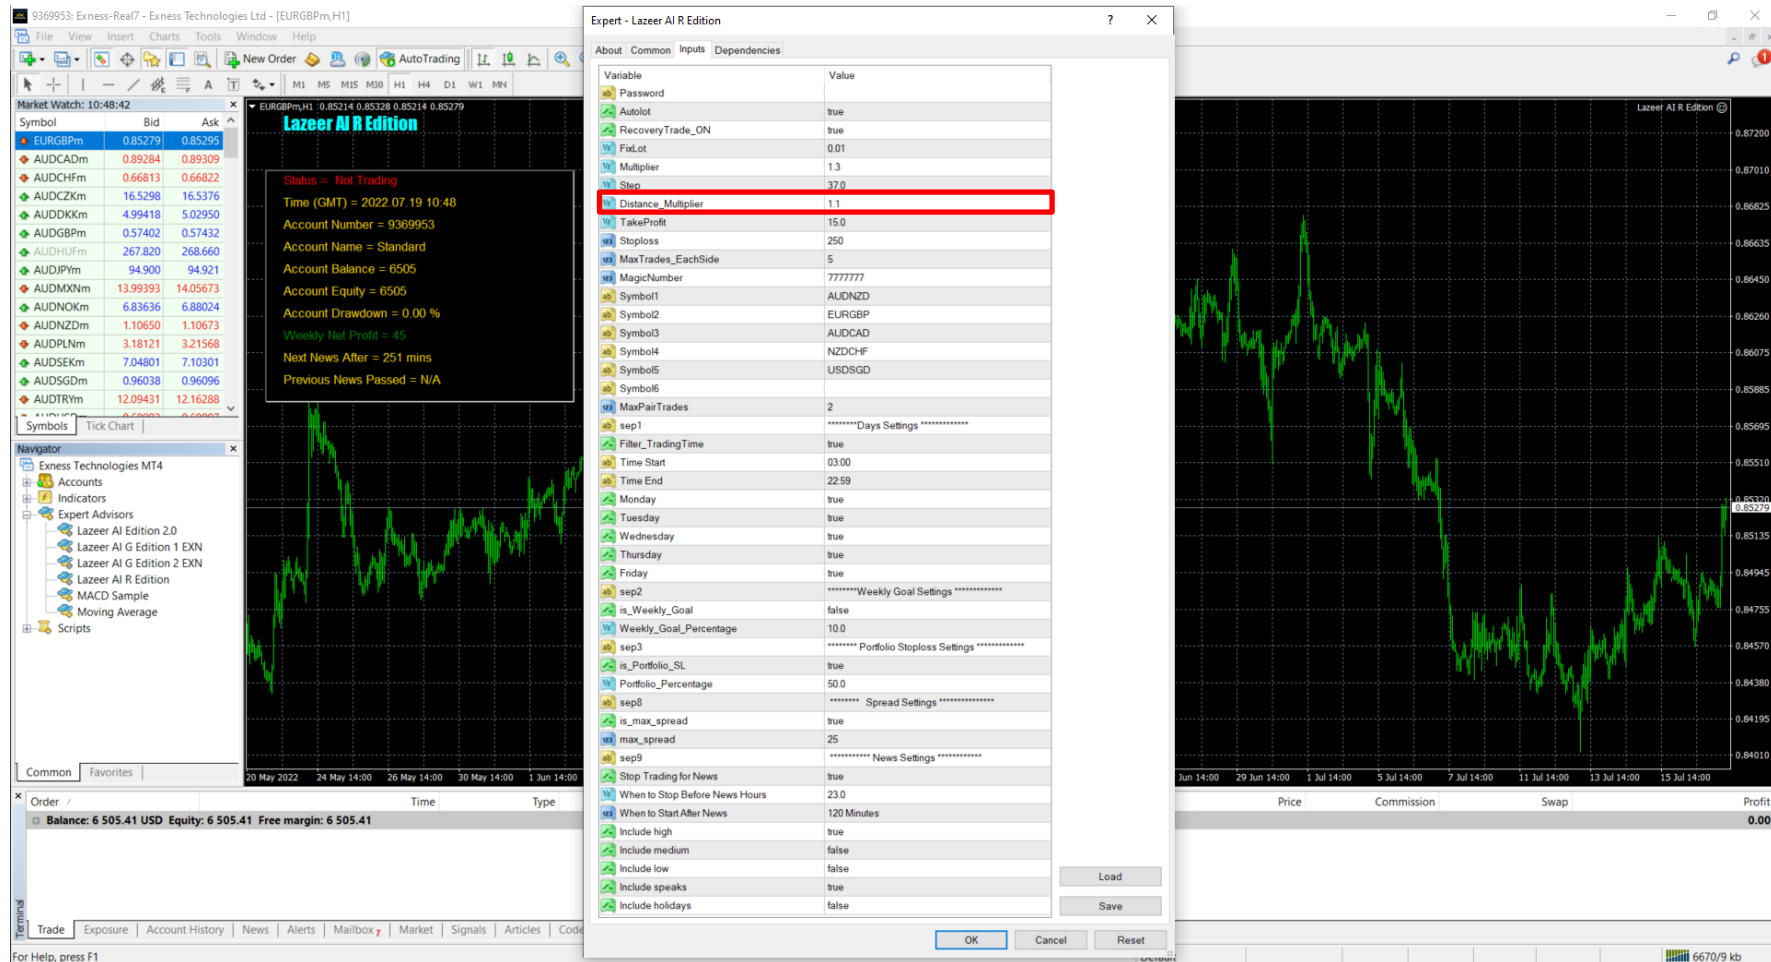

Multiplier: This is the dollar-cost-averaging method (Trade recovery). How this works is that if a trade is still not profitable after 37 steps/pips, it will trigger another trade at 1.3 x the previous lot size. So if the first trade's lot size is 1 then $1 \times 1.3 = 1.3$ for the second trade's lot size. Having a higher multiplier has higher returns and able to recover the trades quicker. **Note: Do not go beyond multiplier of 3.**

Step

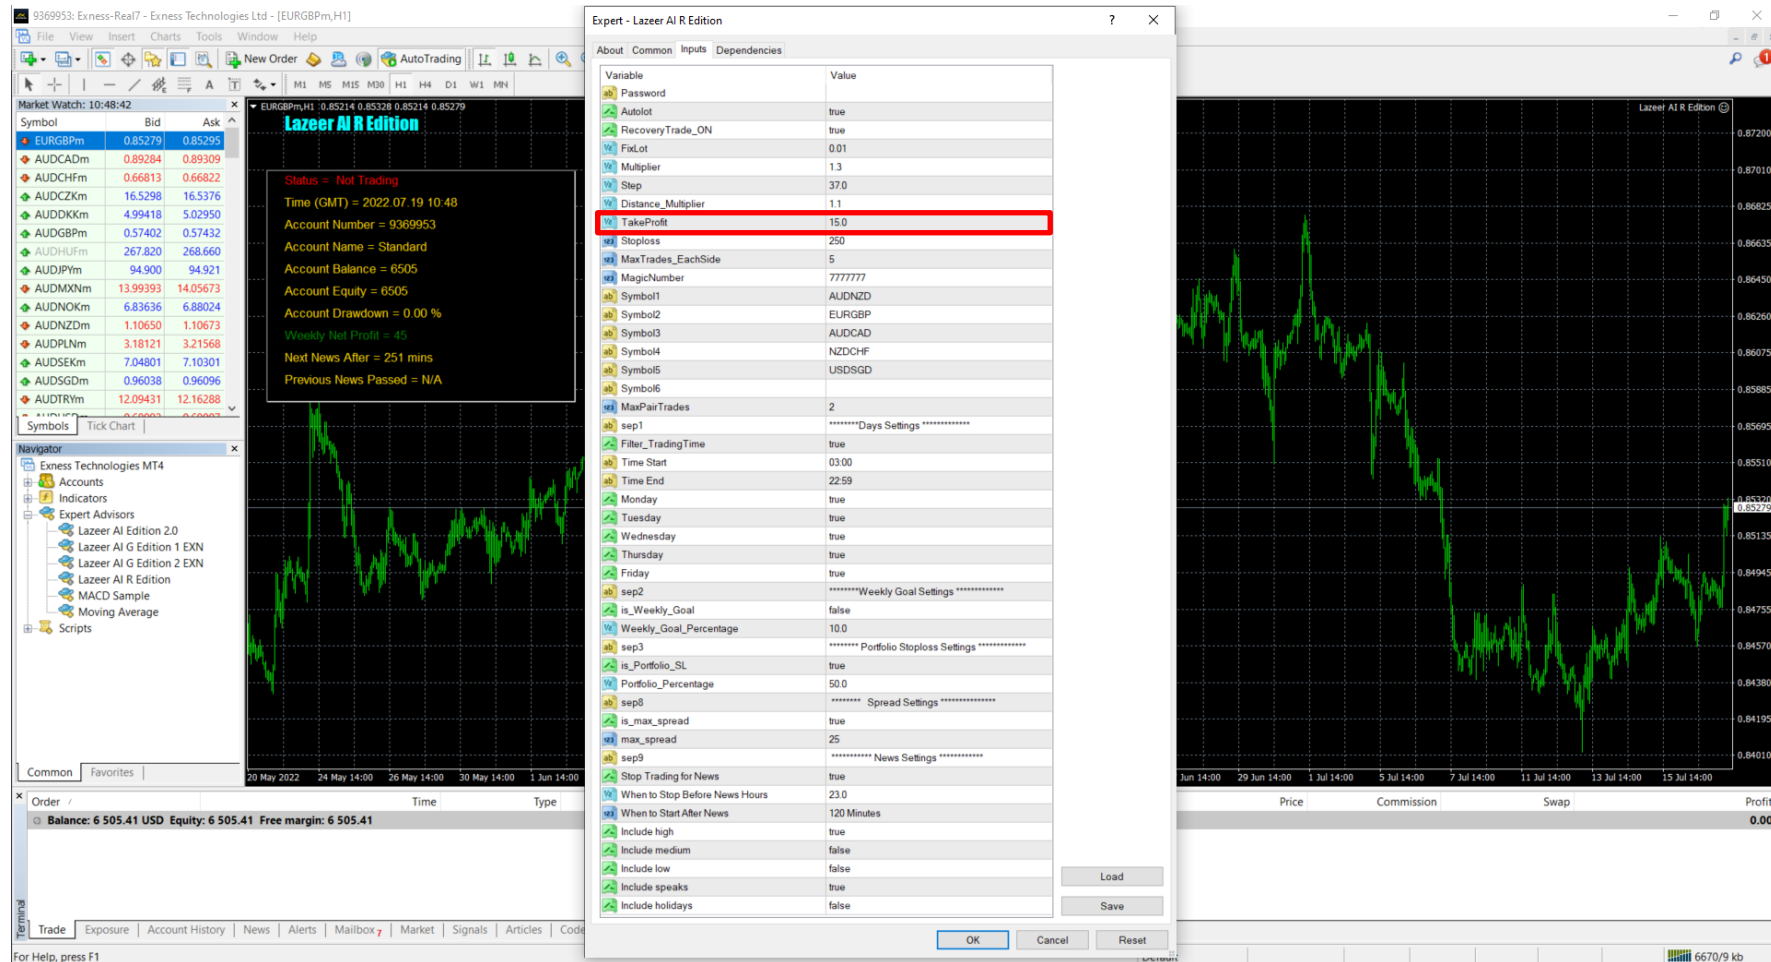

Step: This is the difference of pips/steps between trades. If a trade is still not profitable after 37 pips/steps then it will take another trade to recover the first trades. You can adjust between values; lower value means higher returns and risk. Higher value lower risk and lower returns.

Distance Multiplier

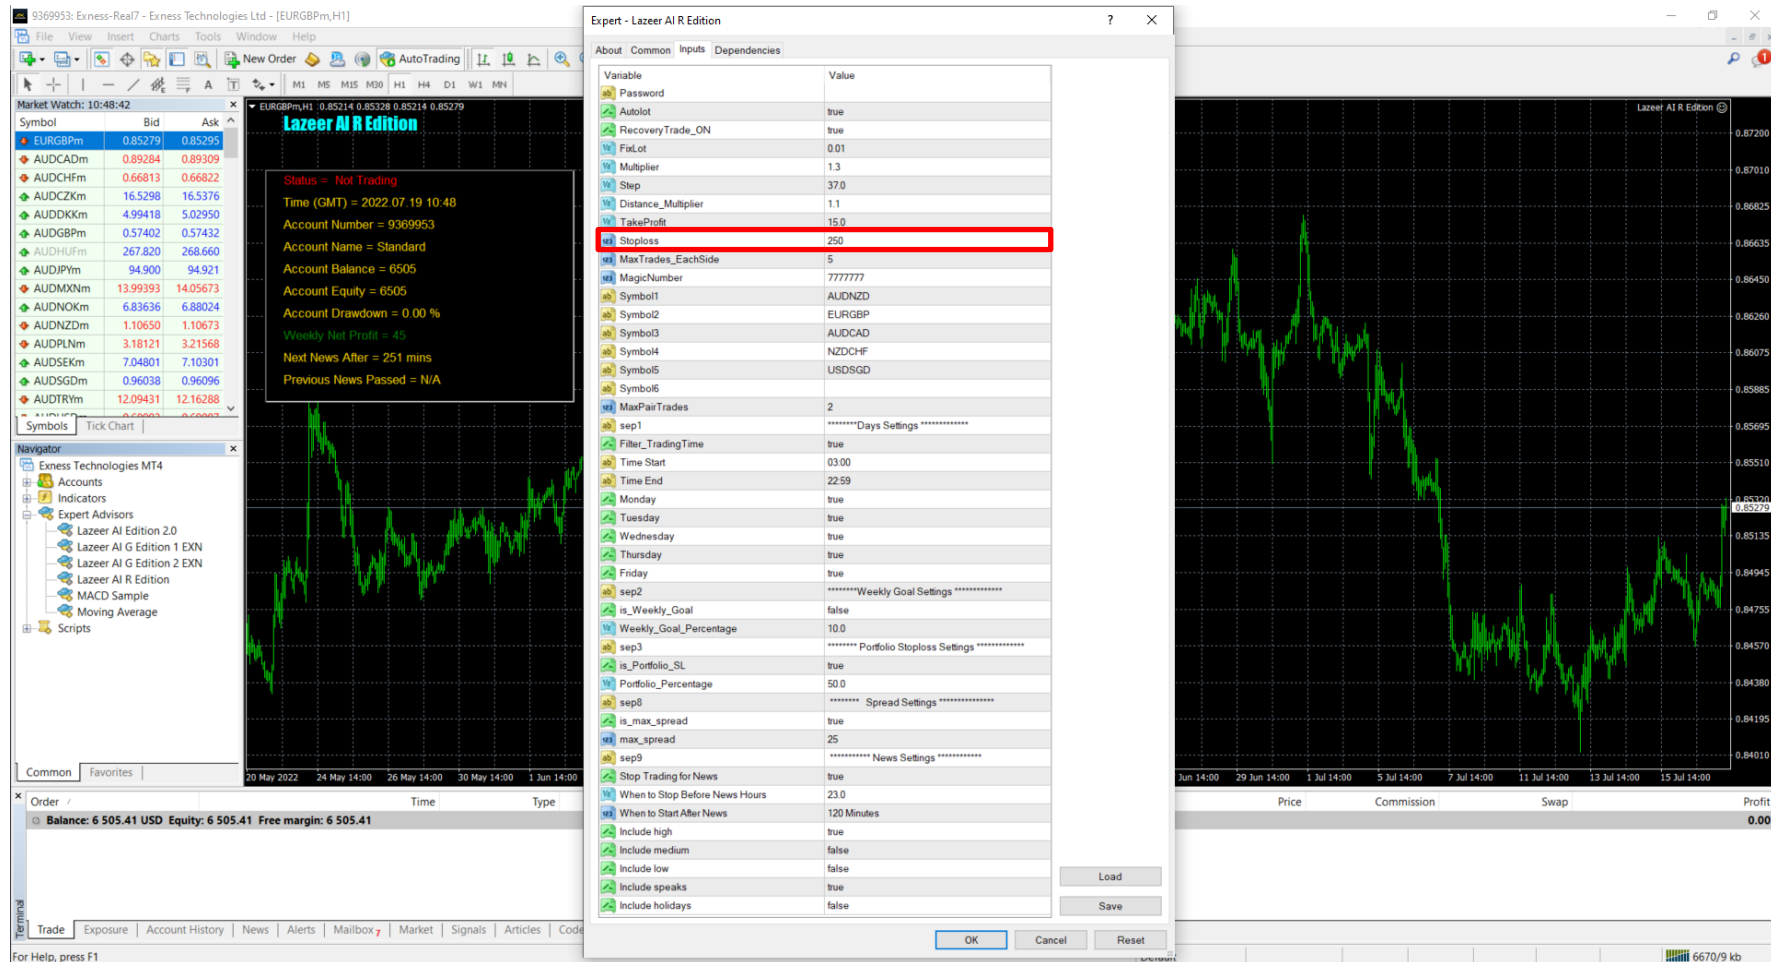

Distance Multiplier: During the trade recovery, this will be the multiplier between the distances in pips between the trades. Function similar to lot multiplier but in distance/pips. Example: If steps are 37 pips to take another trade, then with the Distance Multiplier of $1.1 \times 37 \text{ pips} \sim 40.7 \text{ pips}$, the next trade that will be taking place is 40.7 pips apart from the second trade.

Take Profit

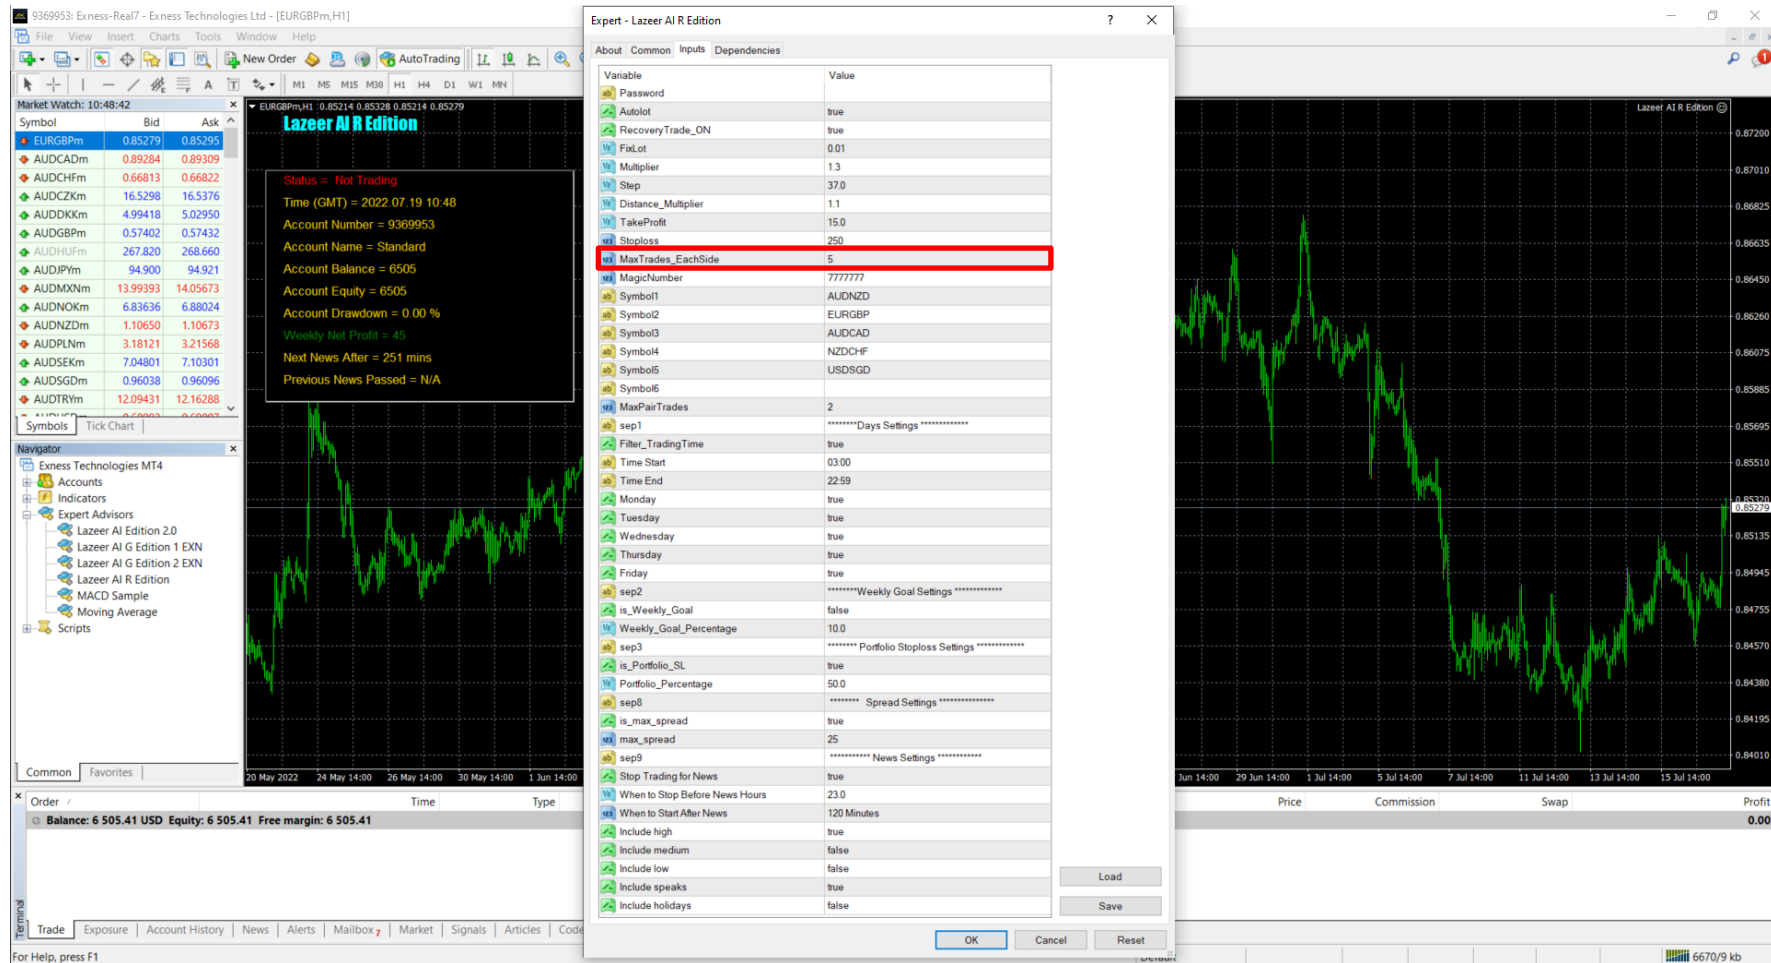

Take Profit: Take profit is the amount of pips that is needed to close a trade. For example if you are buying EurUSD at 1.1000 and the current price is 1.1005, you gain 5 pips and the software will automatically close the trades with a gain of 5 pips. Higher value means you wanted to close the trades in higher profits but it also means higher risk as you will take longer time to reach your targeted pips value.

Stoploss

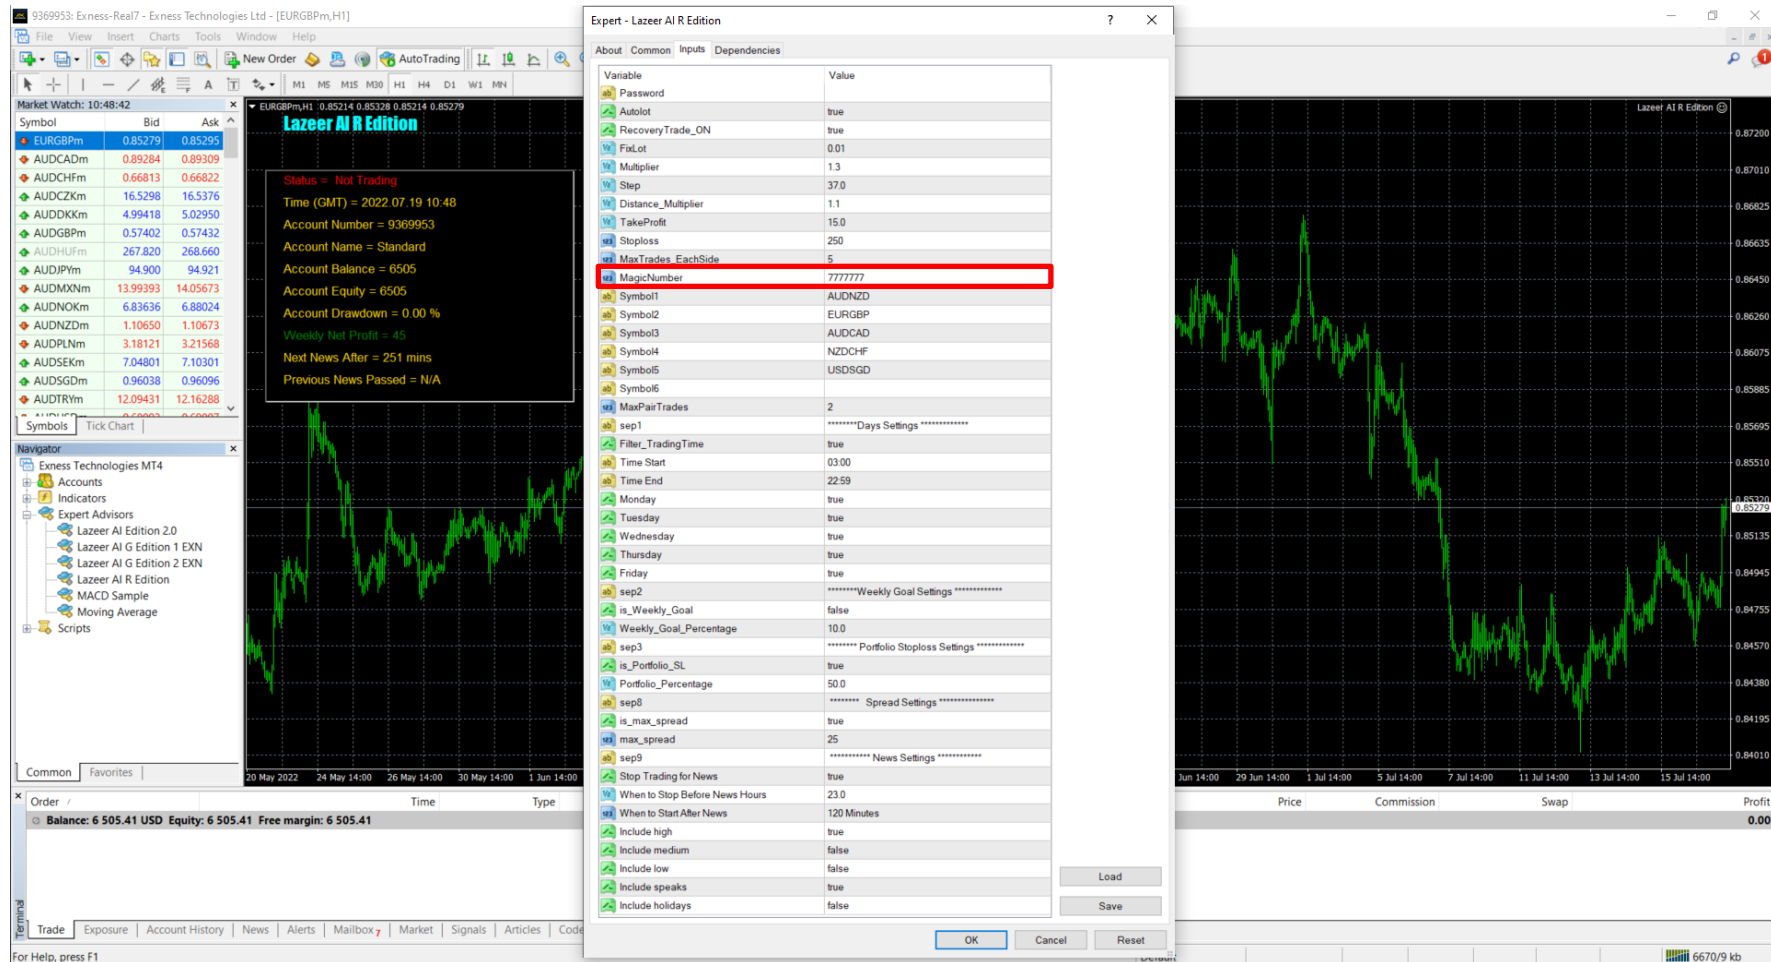

Stoploss: This is the overall stoploss for each currency pair. Having a low stoploss will trigger your losses often as the floating trades need more room for trade recovery. Having a high stoploss will trigger less often. Our default settings of 250 are our second level of stoploss from 10% to 20%. You can shift accordingly, but note that it will defer from the initial plan.

Max Trades Each Side

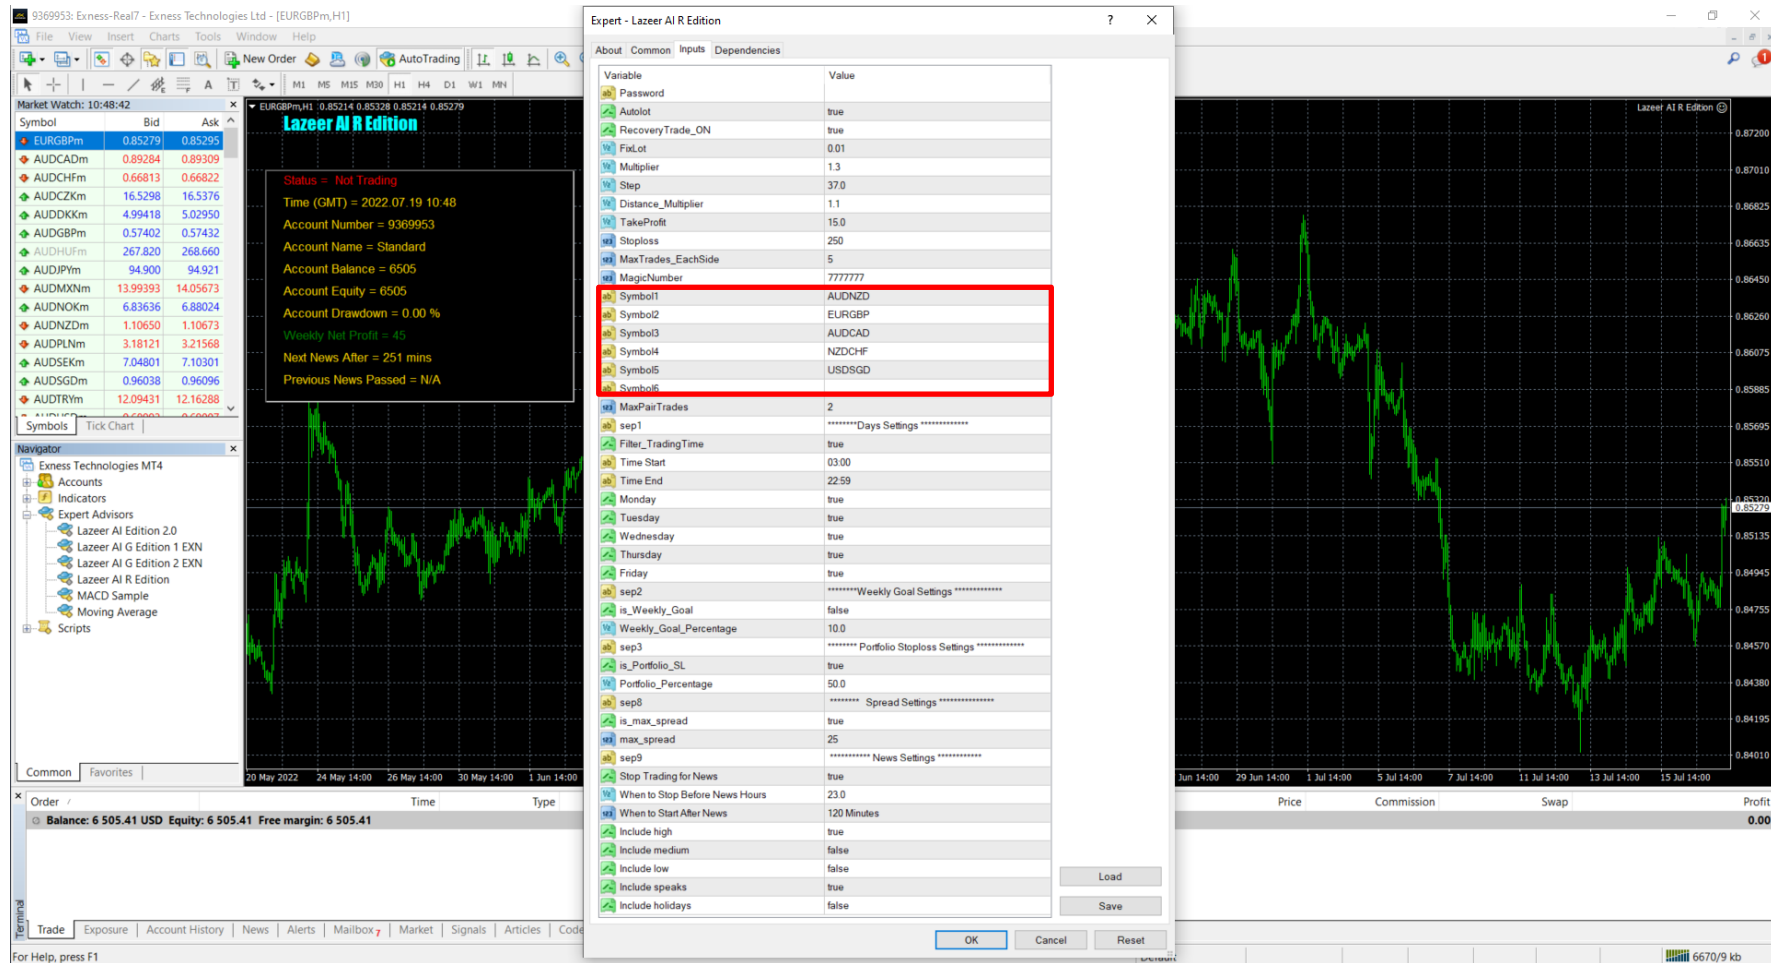

Max Trades_EachSide: This is the maximum trades on each side (Buy/Sell) when the trade recovery is activated. So if your trades are still not profitable, the software will trigger trades to recover and capped at 5. You can change it as you like. However, anything more than 5, it would mean that it will go more than 10 to 20% portfolio loss based on our 3 levels of stoploss risk management.

Magic Number

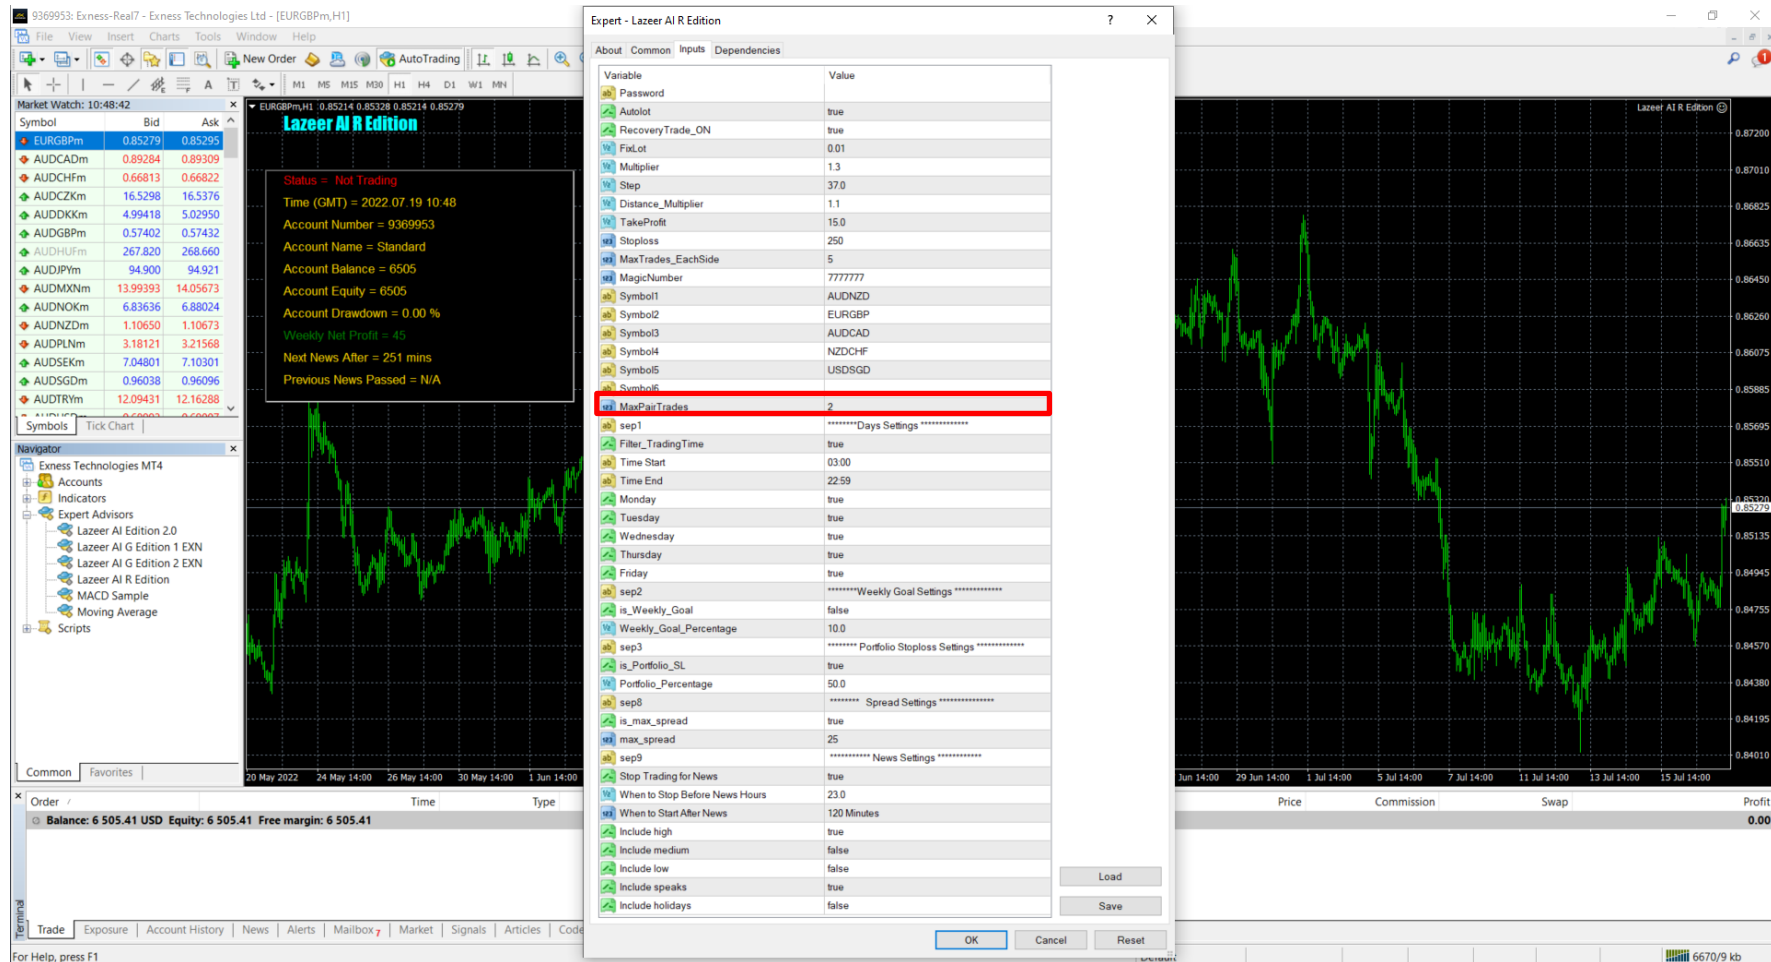

Magic Number: You can change to whatever your lucky number is but only enter numbers. This is normally used to identify your trading software when other types of trading software are used in the same chart or terminal. We normally won't be changing this and it is advisable not to add on other trading software into the chart or terminal as you might encounter algorithmic conflict.

Symbol 1-6

Symbol 1-6: These are the 6 currency pairs used for our forex trading software. Try not to add any other pairs, we had selected these pairs as we have tested it and our strategies works best on these pairs.

Max Pair Trades

Max Pairs Trades: This function is to limit the number of currency pairs traded at any point. Depending on your risk appetite, if you are a high risk taker then set between 3-5 pairs. Average risk taker 2 pairs, low risk setting 1 pairs.

By switching on False, it indicates that you want the AI to continue trading.

Portfolio Stoploss Settings

Portfolio Stoploss – This feature is to determine how much losses in % you can risk on your overall portfolio. For example if you set 50%, it means that once your floating trades in your account drops below 50%, it will trigger a command to close all existing trades and stop further trading. There is no perfect setting to this and it depends on user's risk appetite.

Spread Settings

The screenshot displays the 'Expert - Lazeer AI R Edition' settings window. The 'Spread Settings' section is highlighted with a red box, showing the following values:

Variable	Value
is_max_spread	true
max_spread	25

The background shows a market watch with various currency pairs and a price chart for EURGBPm.H1. The status bar at the bottom indicates a balance of 6 505.41 USD and a free margin of 6 505.41.

Spread Settings: When spread is higher than 2.5 pips or 25 points, robot will not enter the trade. This is to make sure that we won't lose out in spread when the markets are too volatile.

News Settings

The screenshot displays the Lazeer AI R Edition software interface. The main window shows a market watch list with various currency pairs and their current prices. A smaller window titled 'Lazeer AI R Edition' is open, displaying account information such as 'Status = Not Trading', 'Time (GMT) = 2022 07 19 10:48', 'Account Number = 9369953', 'Account Name = Standard', 'Account Balance = 6505', 'Account Equity = 6505', 'Account Drawdown = 0.00 %', 'Weekly Net Profit = 45', 'Next News After = 251 mins', and 'Previous News Passed = N/A'. A third window, 'Expert - Lazeer AI R Edition', is open, showing a list of variables and their values. The 'News Settings' section is highlighted with a red box, showing the following settings:

Variable	Value
Stop Trading for News	true
When to Stop Before News Hours	23.0
When to Start After News	120 Minutes
Include high	true
Include medium	false
Include low	false
Include speaks	true
Include holidays	false

News Settings: Robot will detect the specific currency news and prevent it from trading any currency pairs that is related to that news 23 hours before the news. This is only applicable when there are no existing trades for that currency pair. For example: If High impact USD news is coming in 23 hours, any currency pairs that has USD (USDJPY, USDCAD, EURUSD) will not execute new trades.
